6.3. Permissions management

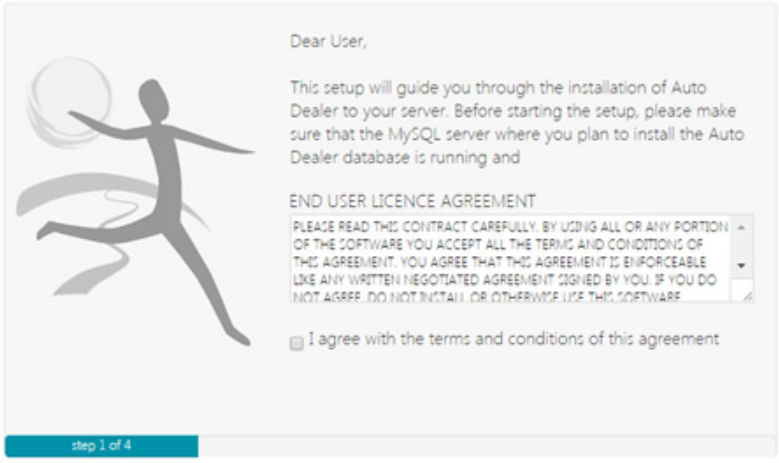
1. Installing the website

You may find below information about the ATN Jobs integrated web installer, the description of the different steps during the installation, possible errors and troubleshooting information.

The installation is quick and easy, it passes through just 3 steps – agreeing with the license agreement (and / or entering the license key, depending on the setup), entering the MySQL information (server, user name and password) and selecting the database to be used for the installation.

Please note also that we offer free installation for all our products, so in a case you prefer that we do the installation for you, you just need contact our support team and we'll do it as soon as possible for you.

Step 1 - Welcome screen and ATN Jobs end user license agreement



Dear User,
This setup will guide you through the installation of Auto Dealer to your server. Before starting the setup, please make sure that the MySQL server where you plan to install the Auto Dealer database is running and
END USER LICENCE AGREEMENT
PLEASE READ THIS CONTRACT CAREFULLY. BY USING ALL OR ANY PORTION OF THE SOFTWARE YOU ACCEPT ALL THE TERMS AND CONDITIONS OF THIS AGREEMENT. YOU AGREE THAT THIS AGREEMENT IS ENFORCEABLE LIKE ANY WRITTEN NEGOTIATED AGREEMENT SIGNED BY YOU. IF YOU DO
I agree with the terms and conditions of this agreement
step 1 of 4

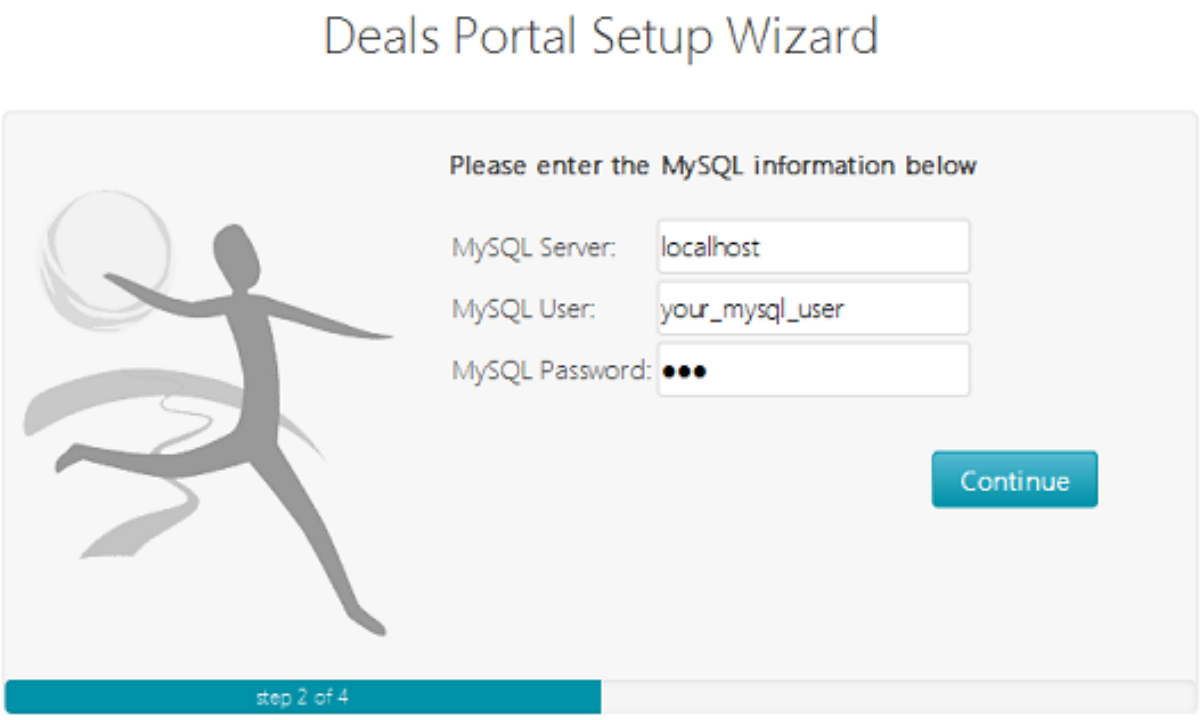
In this first step you'll be able to:
- see the setup welcome message
- read the ATN Jobs end user license agreement

In order to continue to the next step, you'll have to agree with the ATN Jobs end user license agreement by clicking on the check box ("I agree ...").

Depending on the setup, which is used, during this first step you may be also asked to enter the license key obtained during your purchase.

Step 2 – Entering the MySQL server information (MySQL server, user-name and password)

During this step you'll be asked to enter the MySQL server information (the server name, MySQL user and password) of your host. The setup needs this information in order to setup the MySQL database used by the ATN Jobs software.



You'll see a screen with the following fields:

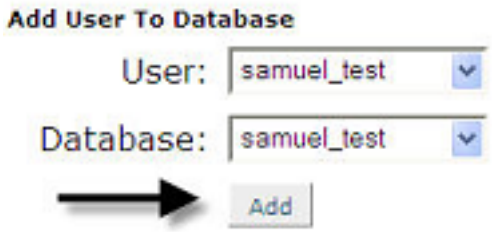
- **MySQL Server,** the server where you plan to install the database, usually "localhost" for most of the hosting companies

Please note that on some hosting companies like GoDaddy, the MySQL server name may be specific for every database, which is created and may look like for example: db_name.db.11111.hostedresource.com
In such cases it's necessary to copy and paste the exact server name, which you may find in the hosting package control panel and the Databases tab there.

- **MySQL username and password**

On most hosting package, you'll need first to create a new MySQL user and database from the hosting package control panel, so it's up to you to choose the password and usern you prefer for them.

Please note that on cPanel hosting package (used by the most popular hosting companies like HostGator, BlueHost, HostMonster, CirtexHosting etc.) if you create a new database and MySQL User you need to explicitly give permissions to this user for the database you created – you can do that from the MySQL Database page in Cpanel, at the bottom.



If you are not sure for these settings, please contact your hosting provider or log in to your hosting package control panel, where usually this information can be found on a page called “MySQL” or “Databases”.

After you enter this information and click on the Continue button, the setup will try to connect to the MySQL server with the user name and password you entered. If any of values aren't correct like (the address of the MySQL server or the MySQL user name and password), then an error message will be displayed and you won't be able to continue until you enter the correct values.

Troubleshooting

1. After you click the Continue button you receive an error message in red saying “Server doesn't exist or access is denied”.

   If this is the case, please check again the values you have entered. If the problem persists:

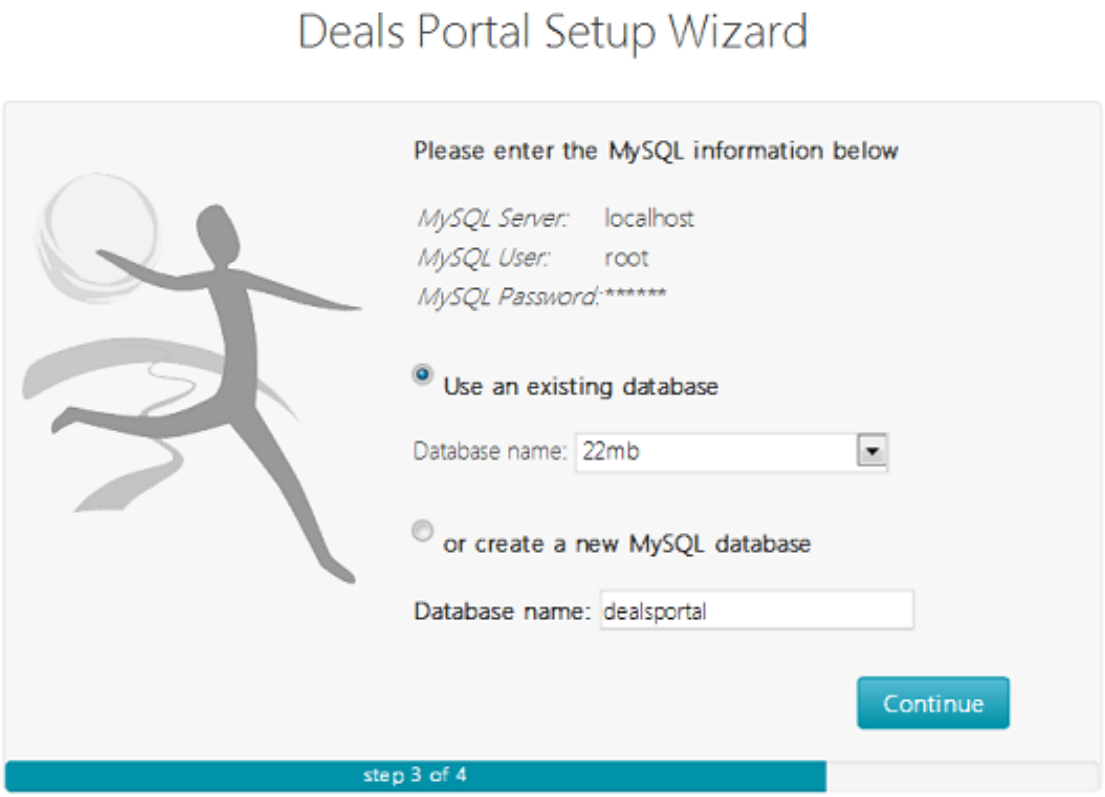
   make sure that your MySQL server is up and running and that this account is valid

   make sure also you enter a correct MySQL server name (on companies like GoDaddy and 1&1 the name isn't the default “localhost” and may be different for every database)

   on cPanel hosting packages, please check if permissions for the database are granted to the MySQL user you entered

   - if you have any troubles finding the correct MySQL information for your hosting package, you can also contact your hosting provider and ask them for the MySQL settings for your hosting account

Step 3 - Setup of the main ATN Jobs database



In this step you'll be asked if you would like to create a new database for ATN Jobs or use an existing one.

If you choose the option to create a new database, you'll be asked to enter the name of the database. We recommend you to use a name, which will be easy to distinguish, like for example jobs_portal. Be aware that when choosing this option, the MySQL user you have provided in the previous step should have the permissions to create new databases on the MySQL server. If this is not the case, the database creation will fail and such error will be displayed on the screen.

If you choose the option to use an existent database, the ATN Jobs database tables will be created in the database chosen by you. All the

tables, which will be created will have a prefix "jobsportal_", no data from the existing database and tables will be deleted.

Troubleshooting

1. I have selected the option to create a new database but when I click on Continue, I get an error message colored in red and I can't proceed to the next step, why?
   - make sure that your MySQL user has "CREATE DATABASE" permissions on the MySQL server
   - make sure that you don't have already a database on your server with the same name as the one you entered

2. I have tried to use the second option, to use an existing database, but I receive an error message saying that the table "jobsportal_admin_users" already exists
   - this means that you have previously installed the script using this database, so you may either use a new database or delete the old script tables and then continue with the installation

Be aware that during this step the setup creates also the script configuration file. If the process running PHP on your server for your hosting package doesn't have write permissions for the folder where you install ATN Jobs you'll receive the following message in the interface:

The process running PHP on this computer doesn't have permissions to create and write the configuration file in the main web folder. You need to create it manually – the content will show up in the screen. You need to copy / paste it in a file "config.php" and upload it in the main web folder (the one in which you uploaded the real estate files). So you could either upload it with FTP or use the File Manager in your hosting package control panel to save the config.php file.

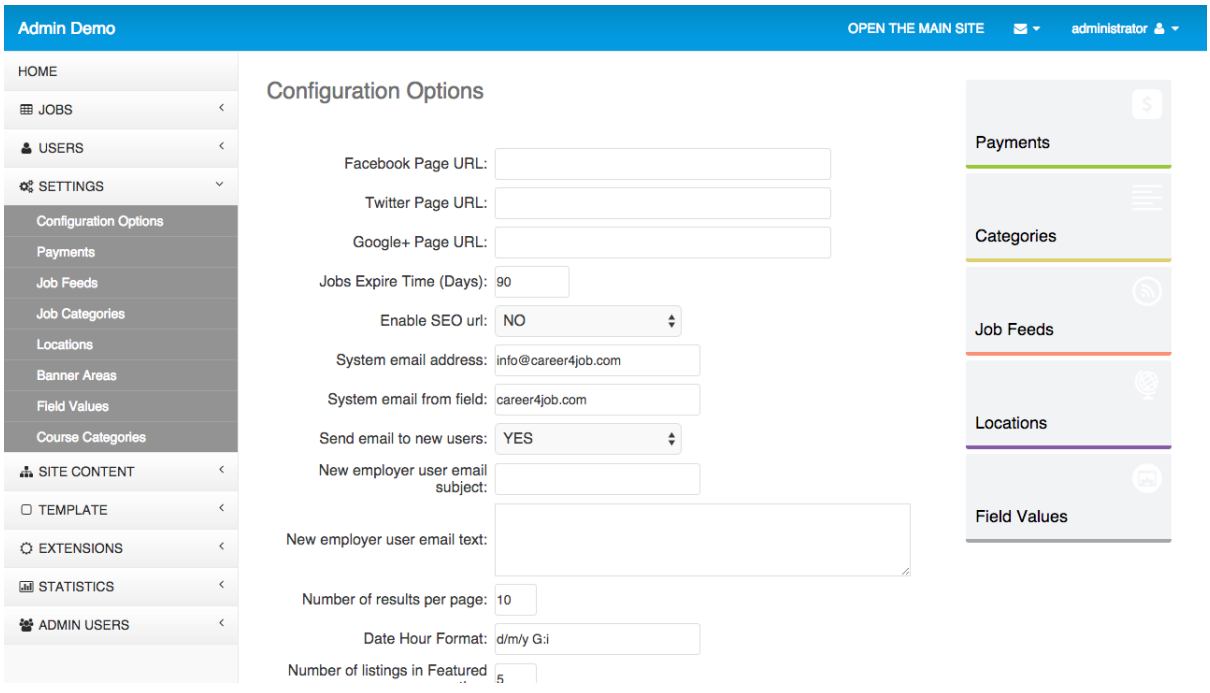
If you experience troubles when doing this or have any additional questions, please don't hesitate to contact us or request our free installation service.

Step 4 – Installation successful screen

If you reached this step, ATN Jobs has been installed successfully on your server/hosting package and you can open now the front site and also the administration panel to manage the website and different settings.

2. Configuring the website

The Settings category in the administration panel and the different pages and options there allows you to manage the configuration options of the website like the jobs expiration time, currency, time zone, payment options, job categories, locations and others. You may find below a list and description of the different configuration options and settings pages.



The Settings category contains the following pages:

- Configuration Options (on which you may find and set the general website configuration options)
- Payments (allowing to set the charging modes and configure the different payment settings)
- Job Categories (allowing to modify the current job categories shown on the website)
- Locations (change the locations and regions shown on the site)
- Banner Areas (allowing to create and configure special banner zones / banner areas in which the users can upload banners for a fee)
- Field Values (modify the possible values of the job seeker fields)
- Job Feeds (configure the different job feeds – Indeed, SimplyHired and CareerJet and their usage on the website)
- Course Categories (change the categories of the courses – shown on the Courses page on the front site and users admin panel when posting course listings)

2.1. Configuration options

The Configuration Options page allows to change the basic settings like the system email address, url format and others. Please find below information about the different settings and configuration options shown on this page.

Facebook Page URL, Twitter Page URL, Google+ Page URL
In these fields you can enter the urls of your Facebook, Google+ or Twitter pages, which will show then as icons / links in the Connect With Us section on the website

Jobs Expire Time (Days)

With this setting you can control the number of days in which the job listings posted on the website will expire. The default value is 30 (meaning the posted ads will expire in 30 days), but you can easily change it with another number of days you may prefer.
If you set it to: -1 , then the job ads posted on the website will never expire.

Enable SEO URLs
The search engines optimised urls look like static html pages and have keywords in the url (which allows better indexing by search engines like Google).
In order to use the SEO links, the system will require the presence of the mod_rewrite module (for Linux / Apache or isapi_rewrite for Windows / IIS). If this module is not available on your server or hosting package, you could deactivate this feature by setting it to NO.

System Email Address
The email address, which will appear as sender of the system emails of the website. Please note that most hosting companies allow to set just a sender using the same domain name. So for example if your website is installed on yourdomain.com, the system email address should be whatever@yourdomain.com and if specifying an email from a different email provider like whatever@yahoo.com they may not send the emails

System Email From Field
The name of the sender of the system email address, usually your website name or company name.

Send email to new users
If set to yes, then welcome emails will be sent to the new users signing up on the website.

New employer user email subject, New employer user email text

If you set the website to send welcome emails to the users, using these settings you can set the title and text of the welcome emails, which will be sent to the new employer users.

Number of results per page
By changing the value of this setting, you can control how many listings will show up on the job result pages shown after an user makes a search or browse a category etc.
The default value is set to 20, meaning that 20 jobs will be shown per page.

Website date format string
By entering a valid PHP date format string, you can change the format of the date displayed on the website.
Full information on the supported date format strings can be found on: http://www.php.net/manual/en/function.date.php

Here are a few examples:
"F j, Y, g:i a" // March 10, 2001, 5:16 pm
"m.d.y" // 03.10.01
"j, n, Y" // 10, 3, 2001
"H:i:s" // 17:16:18

Number of listings in Featured section
Use this setting to control the number of featured listings, which will show up in the Featured Listings section to the right. Please note that if there are featured listings on the website than the available positions (number you set in this field), then the featured listings will show up randomly in the Featured Listings section

New job seeker user email subject, New job seeker user email text
If you set the website to send welcome emails to the users, using these settings you can set the title and text of the welcome emails, which will be sent to the new job seeker users.

Use CAPTCHA images to prevent spamming

A good way to avoid automatic form submissions when creating a web form is to add some kind of verification. One of the best ways is to use an image verification, called also captcha. What it does is to dynamically create an image with a random string displayed on it. Then visitor is asked to type that string in a text field and once the form is submitted it checks if the string on the image matches the one inputted by the user.

The usage of the captcha images is enabled by default, but if you would like to disable it (for example if the PHP graphics library - GD isn't installed on your website), you could change the value of this setting to "NO".

Website time zone

With this setting you can change the default time zone on the website. The time zone coming by default for most of the downloads is Europe/London.

List of the supported time zones can be found on: http://www.php.net/manual/en/timezones.php

Some examples of supported time zones are:

America/Buenos_Aires
America/Chicago
America/Los_Angeles
America/Mexico_City
America/New_York
Asia/Singapore
Asia/Tokyo
Europe/Berlin
Europe/Madrid
Europe/Moscow

Europe/Zurich
...

SEO text to be appended to the job category page title
When clicking on a category, the default page title will be the category name. By adding custom text in this field, you can customise the titles of the category pages, which will be then the Category Title + Your Text (so in this way you can create unique titles for better search engines optimisation).

SEO text to be appended to the job category page meta description
By adding a text in this field, you can add a text, which will be appended to the default meta description for SEO purposes.

SEO text to be appended to the job category meta keywords
By adding a text in this field, you can add a text, which will be appended to the default meta keywords for SEO purposes.

Show number of jobs in category
If set to YES, will show the number of posted jobs in the category like for example Category Name (15). Please note that when the website is configured to use job feeds like indeed, except the jobs posted on the website, when clicking on a category the users will see also the jobs provided by indeed – in this case the number of jobs shown for the category will be only the number of jobs posted on the website itself (not total jobs, which will be taken from indeed.com etc.).

Enable ZIP field, Enable ZIP distance search
These options allow to show or hide the ZIP field and ZIP distance search (available by default for the US and UK on request). For other countries these options may be turned off or just the ZIP field to be left (it can be renamed also to Post Code or other field name in the language file).

Enable Facebook Login, Facebook APP ID, Facebook Secret

Using these settings, you can enable the Facebook log in feature on the front site and set your Facebook APP ID and Secret (it's a Facebook requirement to register your website with them and get an application ID and secret before the log in system could be used on your website). Please visit our the online knowledge base in the support section of our website to find a visual guide on how you could register your site on Facebook and get an application ID and secret

Enable Twitter Login, Twitter Key, Twitter Secret

You can use these settings to enable the Twitter log in on the website and set the Twitter key and secret required by Twitter.
To create a new Twitter key and secret for your website to be used with the Twitter log in system, it's necessary to fo to https://dev.twitter.com/apps/new and there log in, if necessary.
On this page you have to enter the Application Name (you can enter for example your website name or another name you prefer), Description and your website url. The you have to submit the form by clicking the Create your Twitter Application and on the next screen you'll see the key and secret that you can copy in these fields in the ATN Jobs administration panel

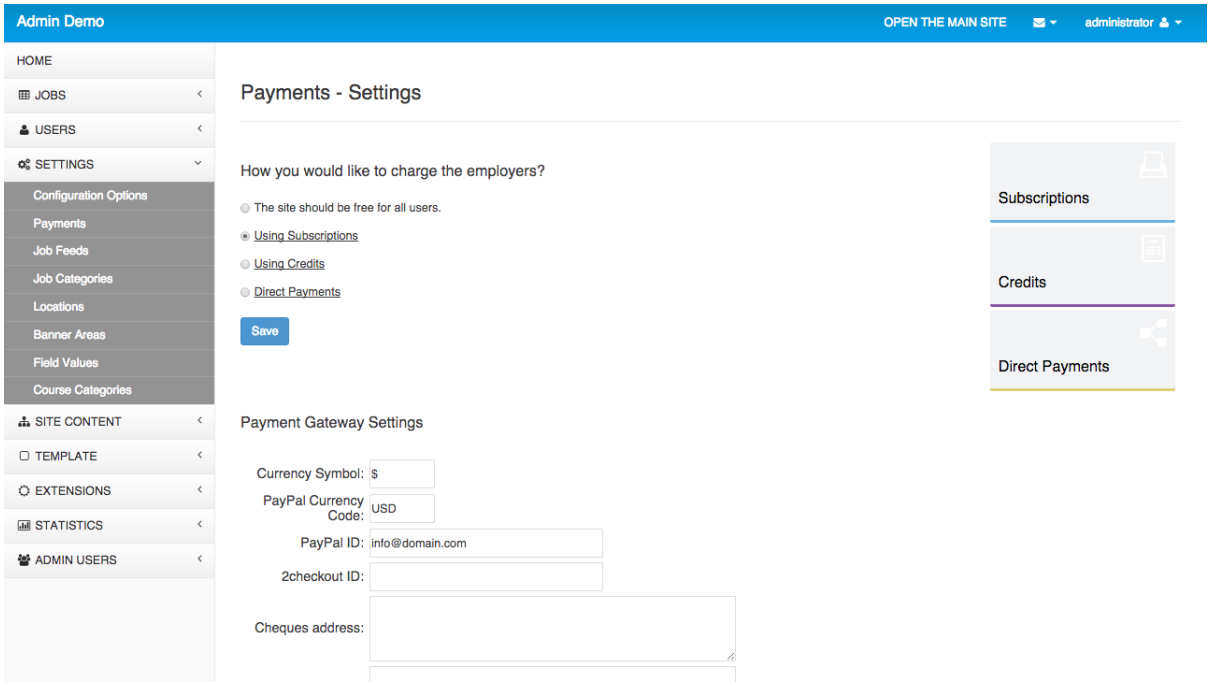
Enable LinkedIn Login, LinkedIn Key, LinkedIn Secret

Similar to Facebook and Twitter, LinkedIn also requires the you create an application for your page in order to use their log in system. To create an application and get your key and secret for it, you have to go to https://www.linkedin.com/secure/developer and there log in with your LinkedIn account, click on Create a New Application and follow the steps - the key and recreate will be generated on the last step and you can copy them in the corresponding fields on the Configuration Options page in the admin panel.

2.2. Setting the payments and payment options

You can choose between 3 main methods to charge the employers – based on credits (the users buy credits and then spend them to pay to pay for the different services on the website), based on subscriptions (the employers can choose a subscription and pay then for example a monthly fee and be able to list up to some number of jobs), direct payment (as soon as the employer posts the job, he sees for example a PayPal icon) or alternatively choose the website to be free for all users and in such case the users won't be charged when posting jobs or using the other services offered on the website.

The administrator is able to select one between these 4 types he prefers from on the Settings → Payments page in the admin panel.



How would you prefer to charge the employers?

Using this setting you can set your preferences if you would like to charge the employers using subscription or using credits or with direct payments or if the site should be free for all users. If you choose to charge them with subscriptions (recurring payments), you can create different subscription packages with different number of allowed maximum ads, featured ads and banners included in them and different pricing and let the users choose the subscription they prefer. If using the credits method, the employers need to purchase credits and they can spend after these credits to pay for the different services offered on the website. When choose the direct payment options, the employer immediately sees an icon to make a payment when for example posting a job etc.

Website currency
By default this setting is set to the US dollar sign "$", but you may change it to another one you prefer (like CHF or €). This will change the currency symbol displayed next to the prices on the website.
This applies for all the prices of the listings on the website, pricing for posting listings and banners etc.

Currency Code
The PayPal currency code if the PayPal system is enabled. By default it's set to USD (US dollars), but can be changed to any other valid PayPal currency code like EUR, GBP etc.

You may find below the currency codes for some of the most popular currencies supported by PayPal:

Australian Dollar ***AUD***
Brazilian Real ***BRL***
Canadian Dollar ***CAD***

Czech Koruna ***CZK***
Danish Krone ***DKK***
Euro ***EUR***
Malaysian Ringgit ***MYR***
Hong Kong Dollar ***HKD***
Mexican Peso ***MXN***
Norwegian Krone ***NOK***
New Zealand Dollar ***NZD***
Philippine Peso ***PHP***
Polish Zloty ***PLN***
Singapore Dollar ***SGD***
Swedish Krona ***SEK***
Swiss Franc ***CHF***
Thai Baht ***THB***
U.S. Dollar ***USD***

PayPal ID
When the PayPal system is enabled, in this field, the administrator/ website owner has to enter the PayPal account (registered PayPal email address) he would like to use to charge the users on the website.

2checkout ID
When the 2checkout system is enabled, in this field, the administrator/ website owner has to enter the 2checkout SID (Seller ID) of the 2checkout account he would like to use to charge the users on the website. The seller id can be obtained from the 2checkout website (during a new registration for the new users) or from the admin panel for the registered ones.

Cheques address
In this field the administrator has to enter the address, which has to be used for the cheques to be sent if the cheques payment options is enabled on the website.

Bank account information

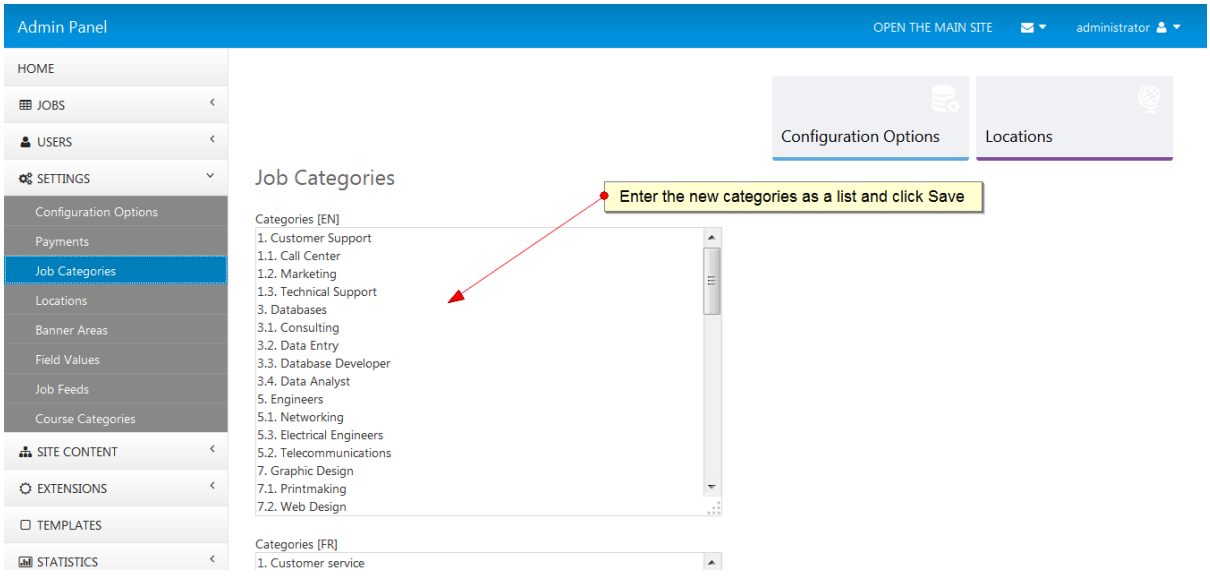
In this field the administrator has to enter the full information for the bank account to be to be used when the bank transfer payment option is enabled on the website.

Amazon Payments ID, PayFast ID, InterKassa ID, Google Checkout ID, Skrill/Moneybookers ID , PayMate ID

To enable any of the following system in order to charge the users, it's enable to enter your ID for them in the corresponding text fields on the Configuration Options pages.

If you wish to disable any the systems in the future, it's necessary to simply delete the corresponding ID.

2.3. Job and course categories



The job categories should be set as a list with leading numbers showing their hierarchy, for example:

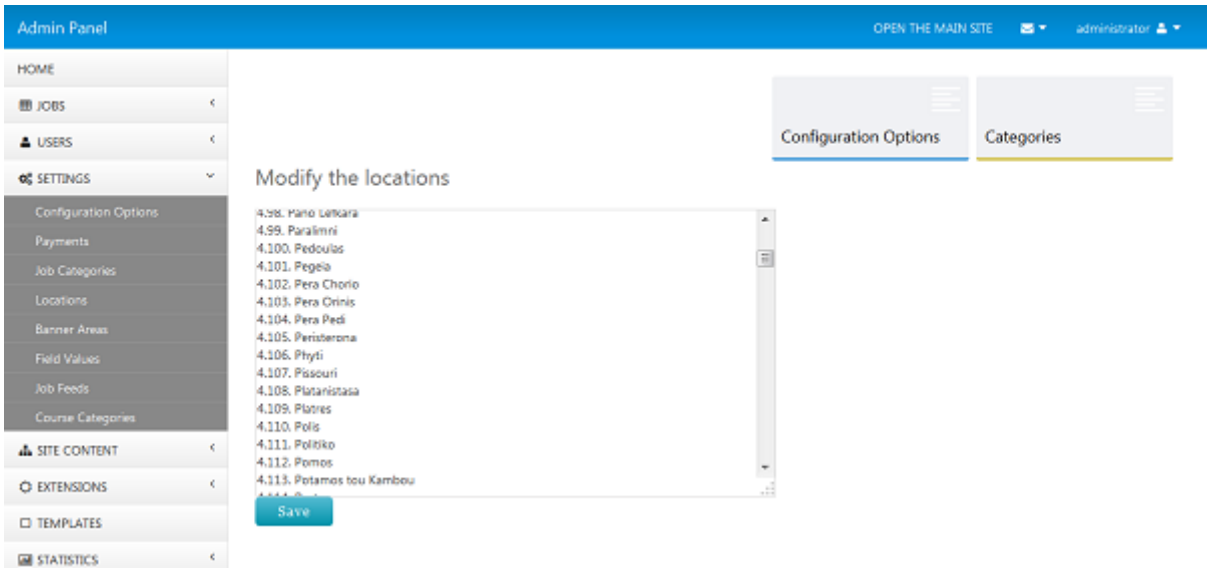
1. Some Main Category
1.1. Sub Category of the Main Category
1.2. Another Sub Category of the Main Category
...
2. Another Main Category
...

It's not required that the numbers are in successive order, so it can be possible for example to have -

1. First Category
49. Second Category
3. Third Category

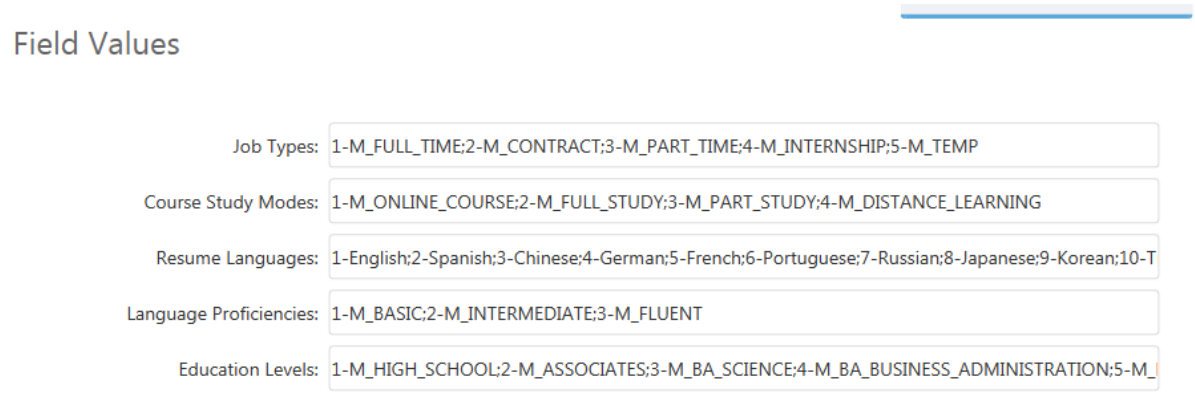
If you have more than one language added on the website, you'll see separate text areas allowing to enter separately the categories for the different languages on the site.

2.4. Modifying the locations



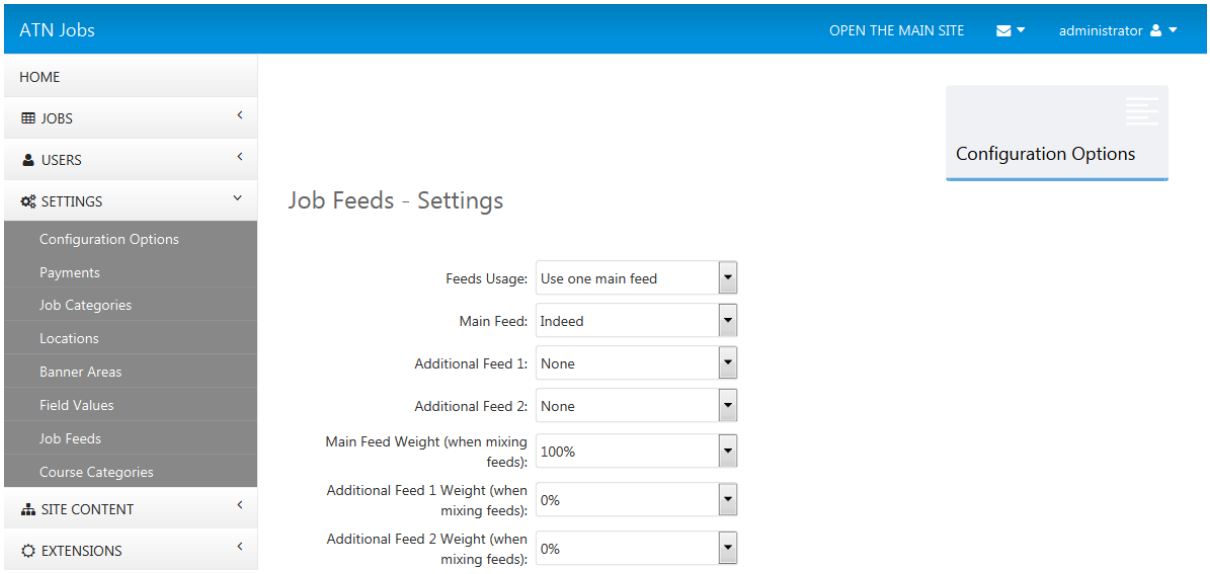
Similar to the job categories, the locations can be set as a list with leading numbers showing their hierarchy. By default up to four levels of locations as supported, so you may have for example Country – State – City – Neighborhood.

2.5. Changing the default field values



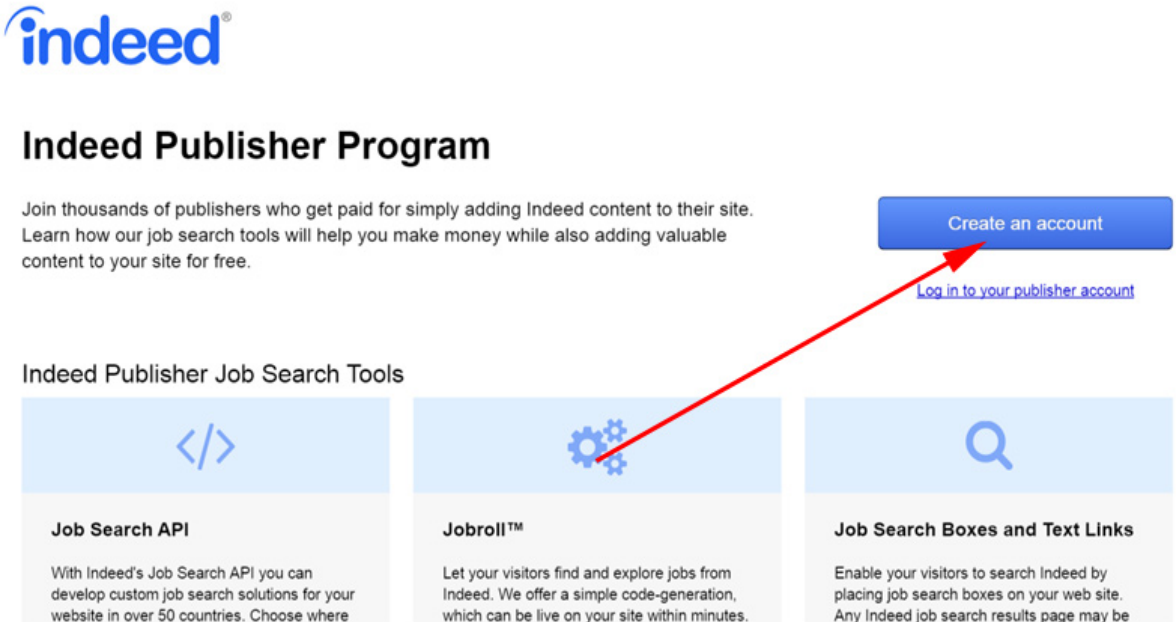
This page allows to set the values of some of the basic fields available for the job seekers to create their resume or set their job preferences.
Please note that when setting the new values, you can use words from the language file or enter the value in plain text, for example if you use *M_FULL_TIME* the system will search for the word *M_FULL_TIME* in the language file (for example include/texts_en.php for the default English language with M_FULL_TIME set to "Full Time" there) and will display Full Time.
If you don't use multiple languages on your website, instead of using words from the language file you may simply enter the text "Full Time".

2.6. Configuring the job feed usage



Using the Settings → Job Feeds page, you can configure the different job feeds used on the website. You can choose between displaying one main feed (like for example to show only indeed jobs on the site) or to mix and show different feeds. Please note that all these systems require that you first sign up with them, get a partner ID that you can set on this page in order to activate the feed on the site and start displaying jobs.

You may find more information about the different partner programs and their conditions on the respective sites of the companies. For example for indeed, please visit http://www.indeed.com/publisher and to create an account please click on the big blue Create an Account button there, as shown on the screen shot below:



indeed
Indeed Publisher Program

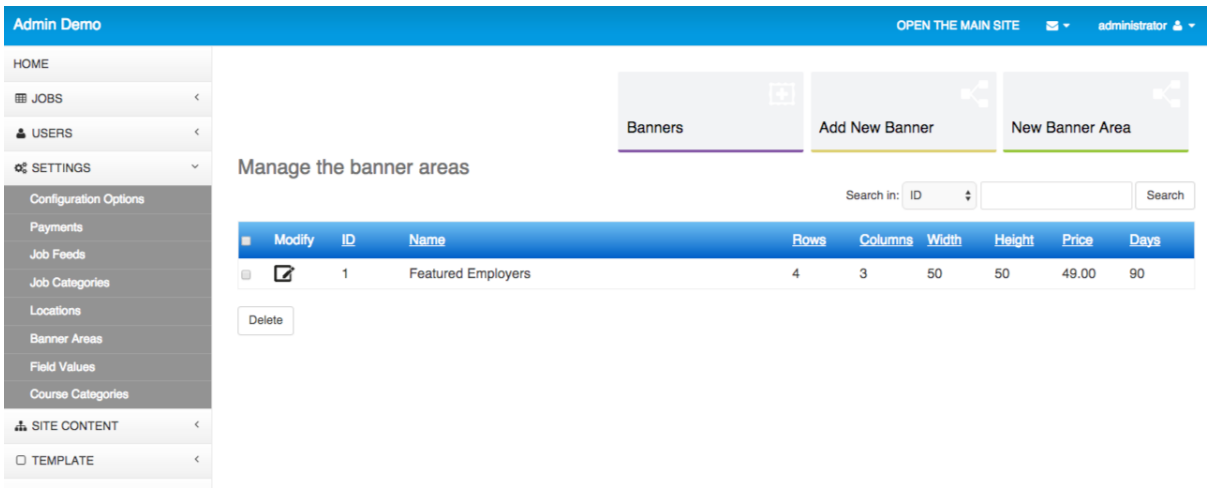
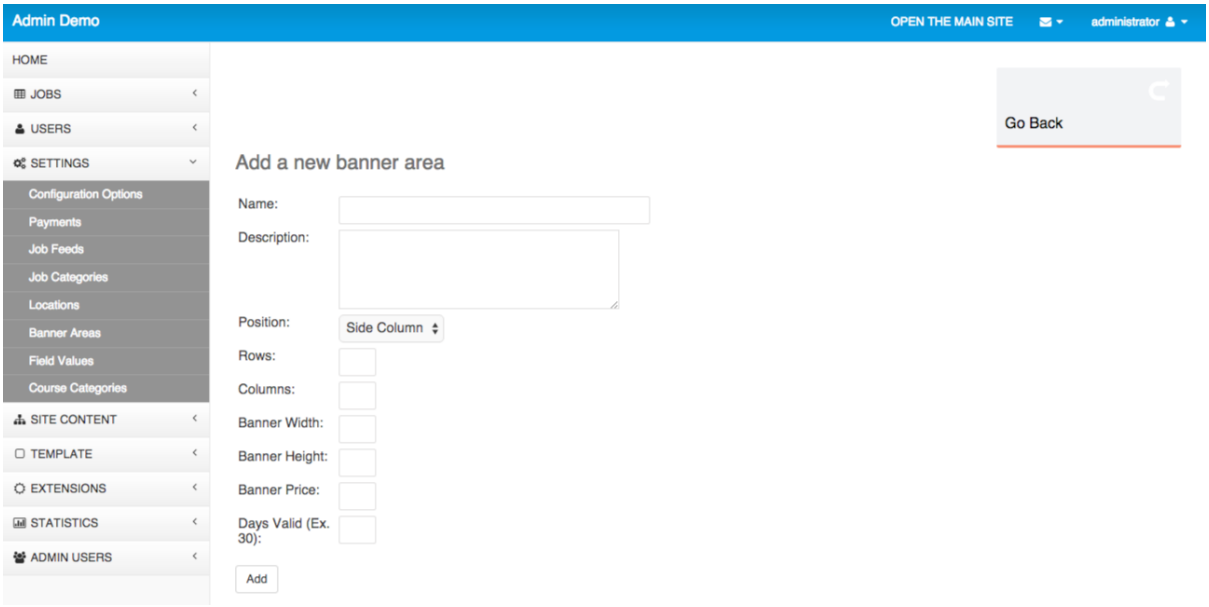
Job Search Boxes and Text Links
Enable your visitors to search Indeed by placing job search boxes on your web site. Any Indeed job search results page may be

2.7. Configuring the banner zones on the website

The Banner Areas functionality allows the administrator to create special banner zones / banner areas in which the employers can upload their banner for a fee.



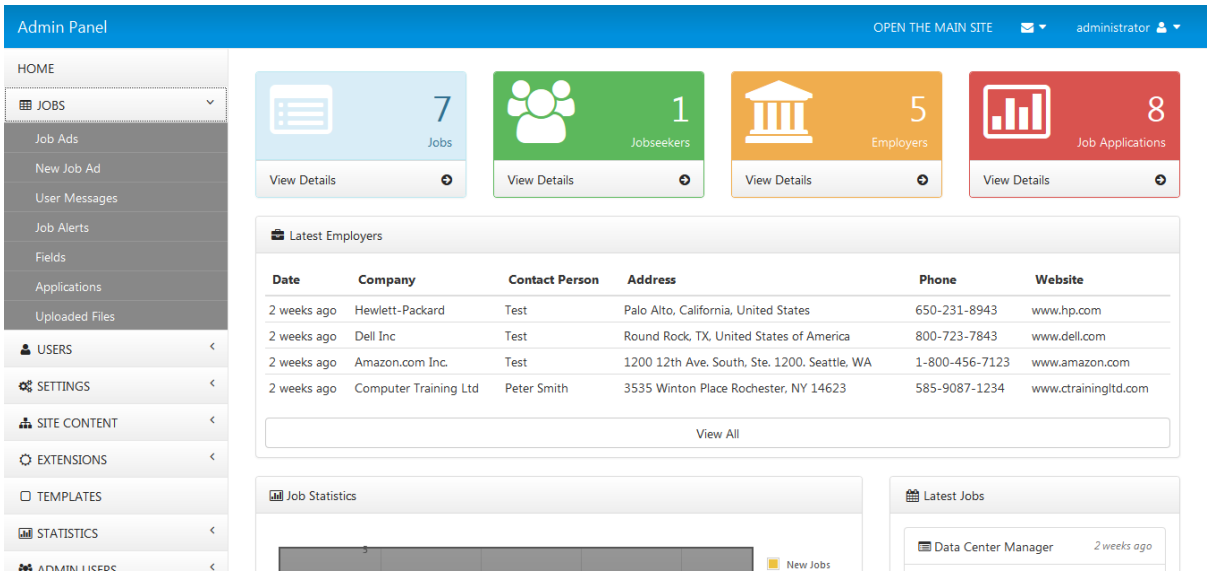
There are no limitations for the number of the different banner areas the administrator can create and for every banner area, he can set the banner width and height, position and price.



When adding a new banner area, the administrator has to enter its name and description, the banner area position (there is a choose between Side Column - the banners will be displayed in the side / right column of the site, Top and Bottom), number of rows and columns (if setting for example 2 rows X 6 columns, the banner are will be able to display up to 12 banners in 2 rows and 6 columns), width and height (the width and height of the individual banners added in that area) and the number of days in which the banners added in this area will expire.

3. Administration panel

When creating the software, we tried to design and create an administration panel, which is as user friendly as possible and gives quick access to all the settings and ads management pages.
The administration panel is responsive and mobile friendly (adapting to the different screen sizes) and is also using tiles to make easier working with it when using touchscreens.



3.1. General overview

The administration panel is the main tool available for the ATN Jobs website administrator to manage the website, change its settings, page content, see the registered employer and job seekers, the jobs posted on the website, modify the templates and others.

The features in the admin panel are divided in categories. The main administrator and the members of the Administrators group have ac-

cess to all the categories and pages in them.

The ATN Jobs administration panel functionality is divided in 8 categories / menus in the main start menu:

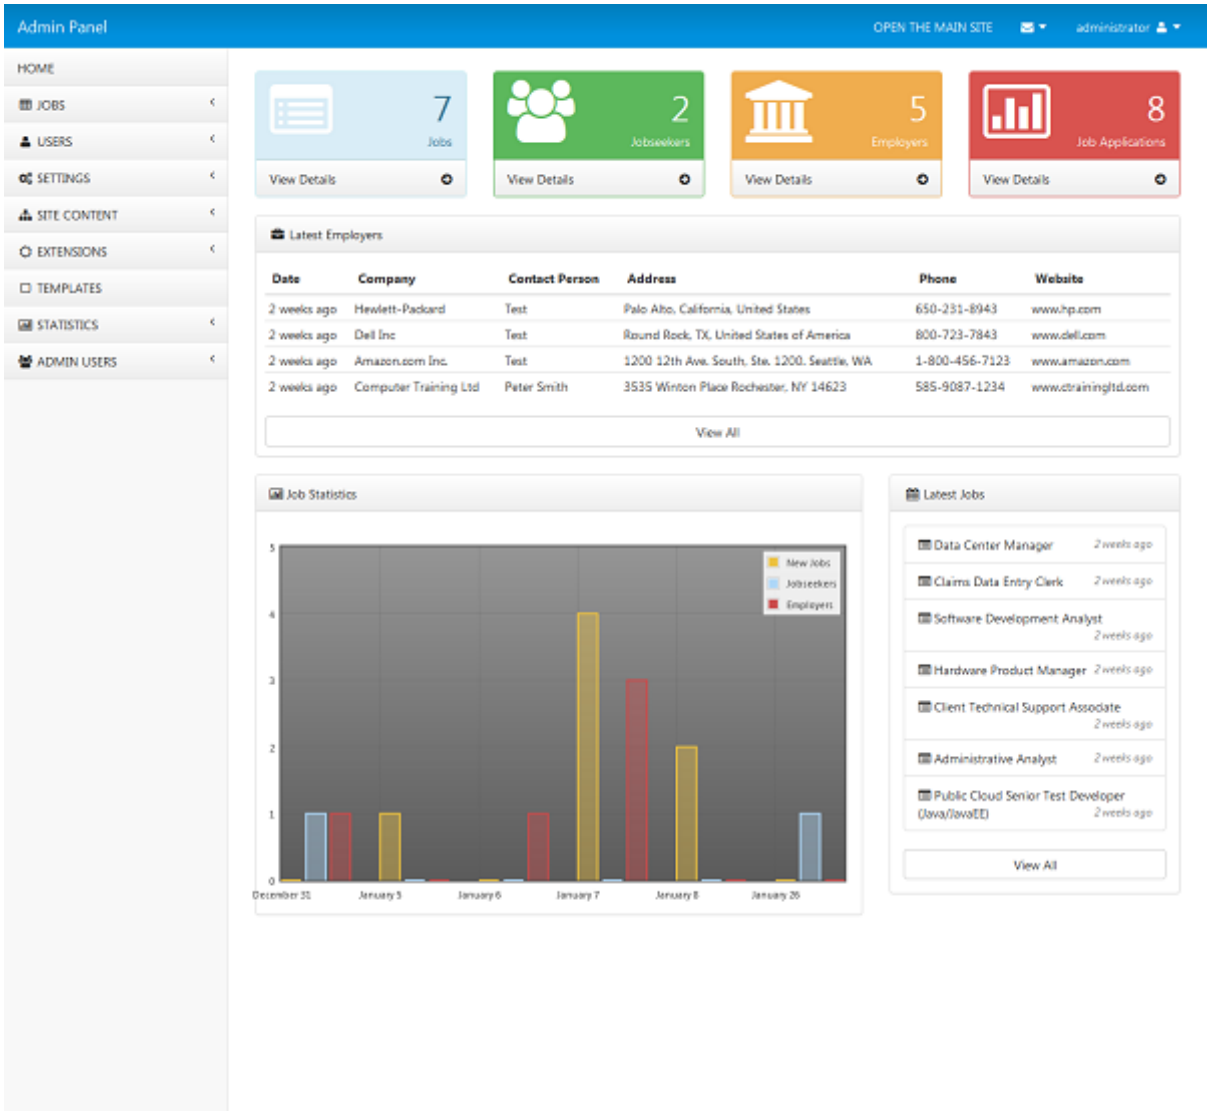
- **Home** (welcome / dashboard page, modification of password, log in report)
- **Jobs** (management of the job listings, applications, job alerts and others)
- **Users** (employers and job seekers management, adding custom fields for the users)
- **Settings** (management of the locations, configuration options and others)
- **Site Content** (front site structure and content management, navigation menu settings)
- **Extensions** (custom extensions and extension files and different modules)
- **Templates** (front site templates management)
- **Statistics** (reports and referrals for the website visits)
- **Admin Users** (management of the administration panel users, groups and permissions)

3.2. Main pages in the administration panel

You may find below a quick overview and brief information about the most used pages in the administration panel and functionality on it.

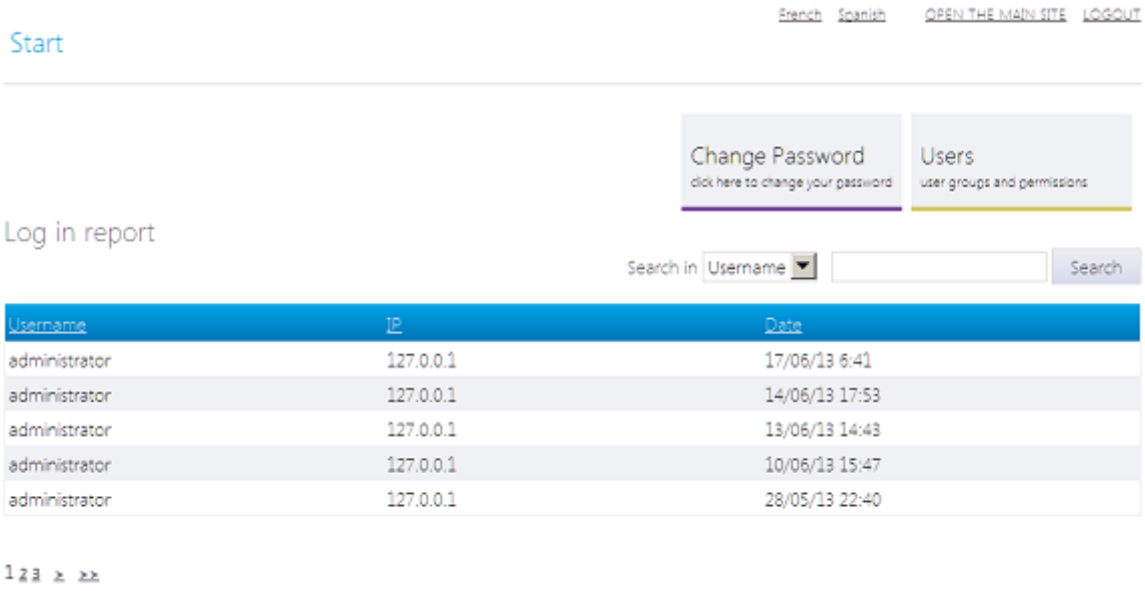
Home → Welcome

The Welcome page in the administration panel provides quick information about the new listings waiting to the approved and statistics, as well as links to the main pages in the administration panel for easier navigation.



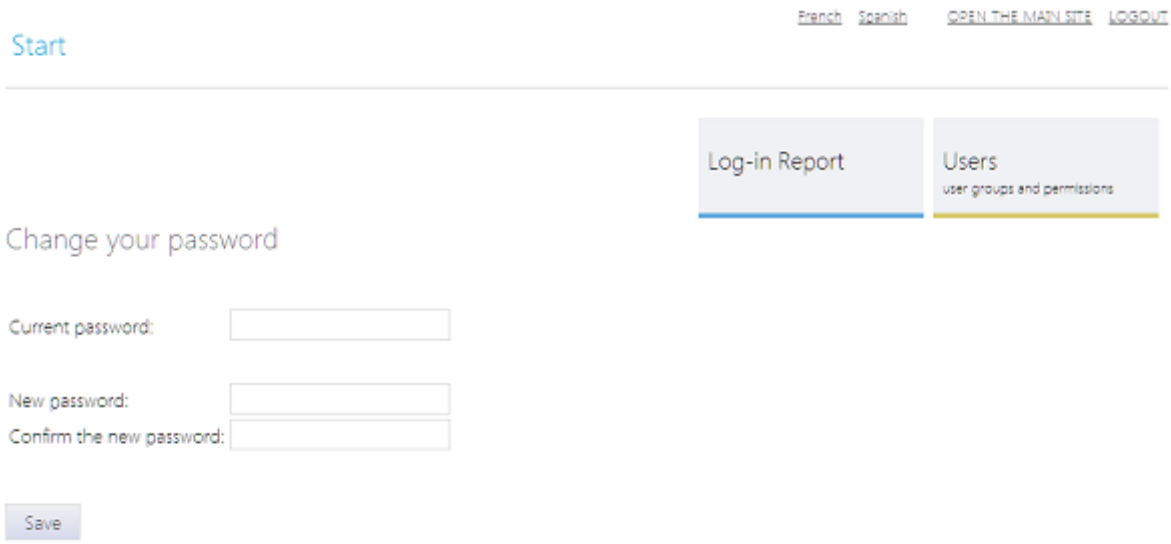
Home → Log in Report

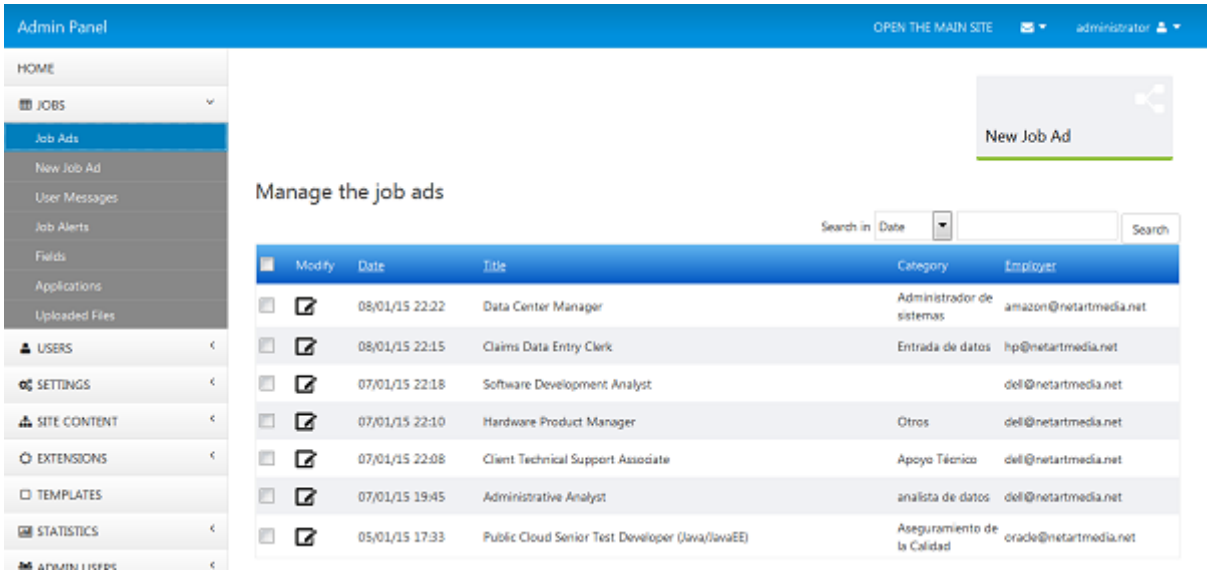
The log in report shows a log of the administration panel log in attempts – the successful and failed log ins with their date and IP address.



Home → Change Password

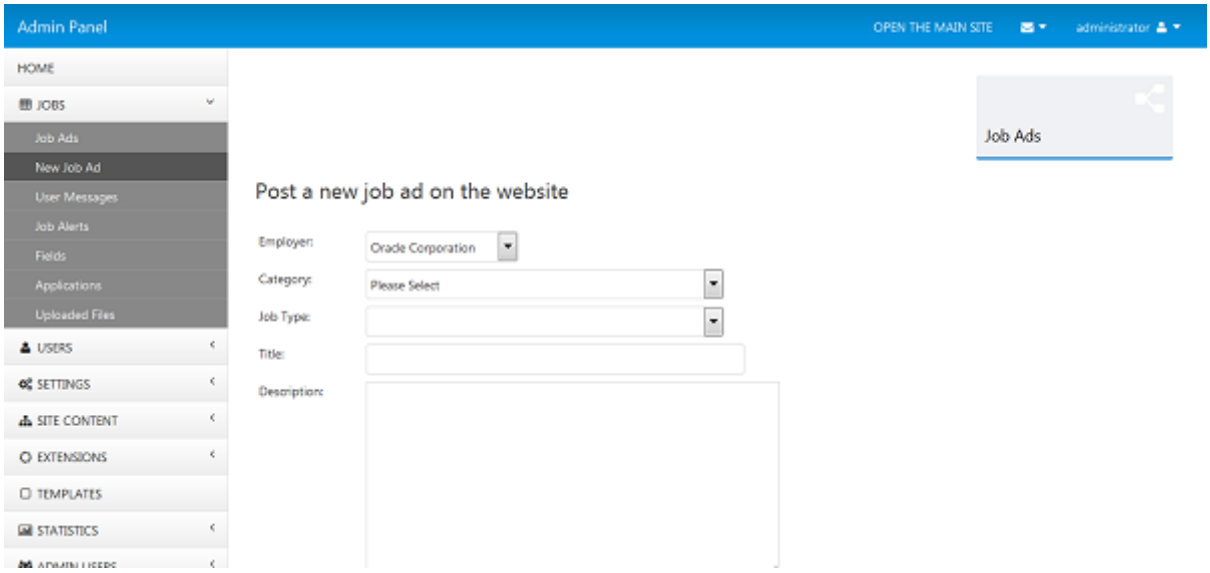
This page can be used to change the password of the user for the administration panel. To change the password it's necessary to enter the old password and the new one and confirm it – after the password is changed successfully, the user will be logged out and asked to log in again with his new password.





Jobs → Job Ads

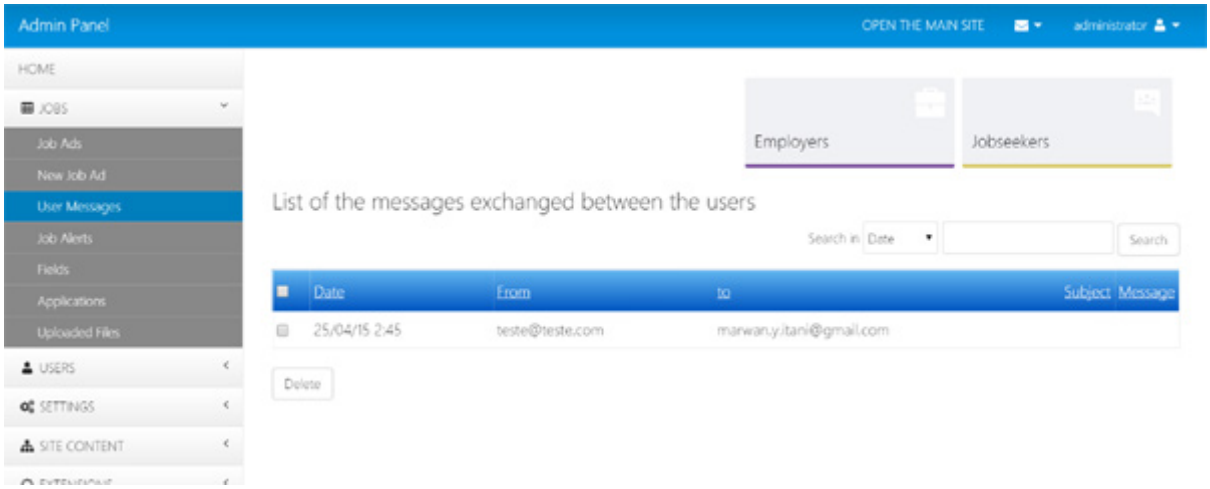
The page allows to see the jobs posted by the users, modify or delete them.



Jobs → New Job Ad

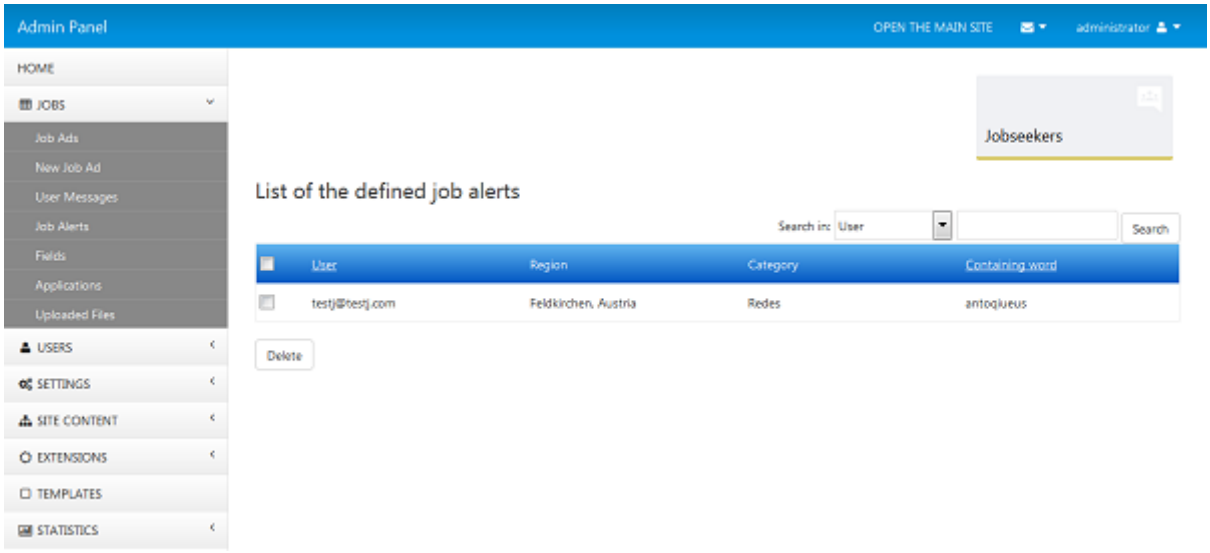
Using this page, the administrator is able to post a job for a selected employer.

Jobs → User Messages



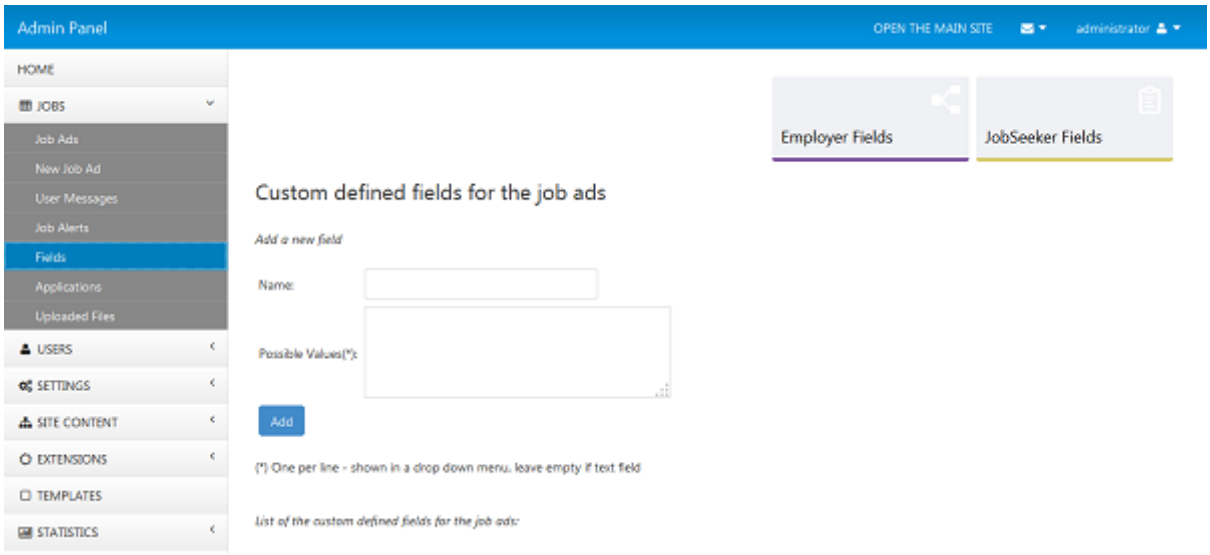
The page allows to see the messages exchanged by the users and moderate them.

Jobs → Job Alerts



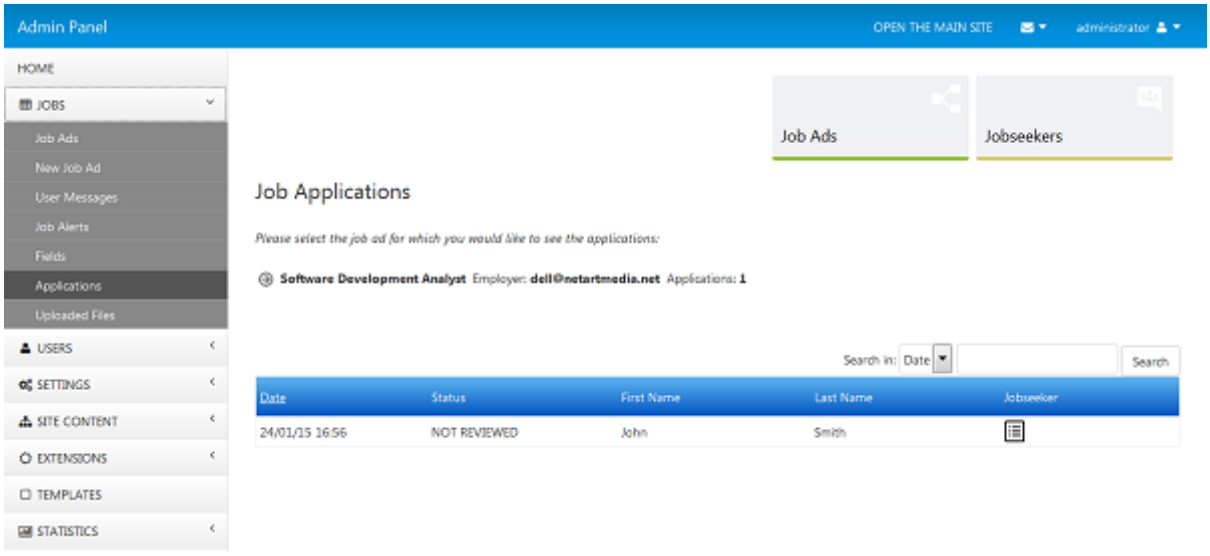
The Job Alerts functionality can be used by the job seeker to create email alerts and be notified by email when a new job meeting their search criteria is posted on the website.

Jobs → Fields



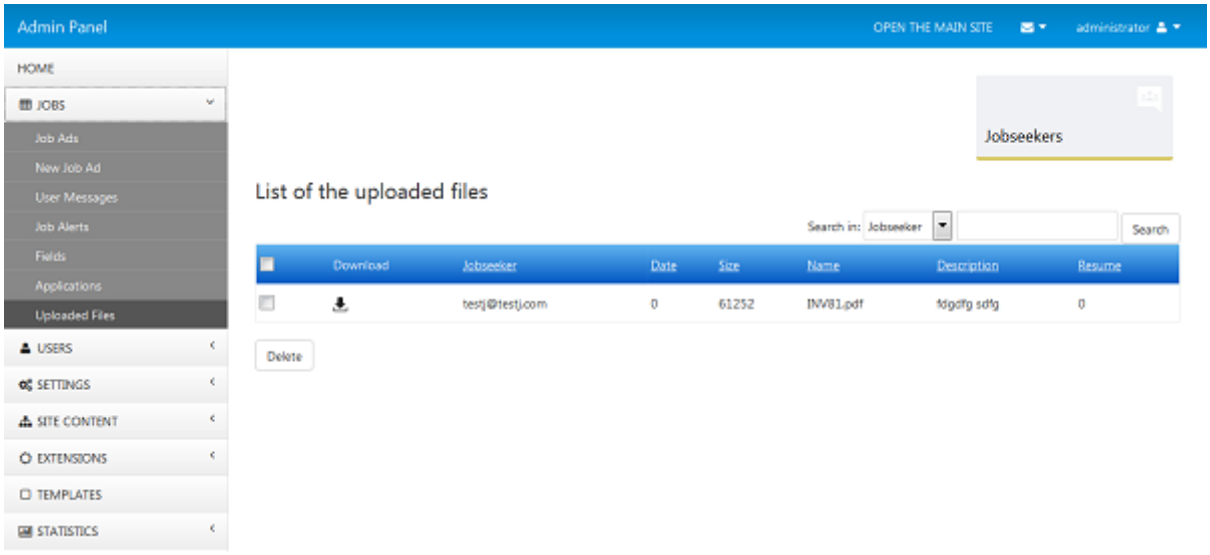
Using the functionality on this page, the administrator can add new custom fields for the job ads – these new fields will show up then on the forms for posting new jobs and also on the main site when seeing the job details.

Jobs → Applications

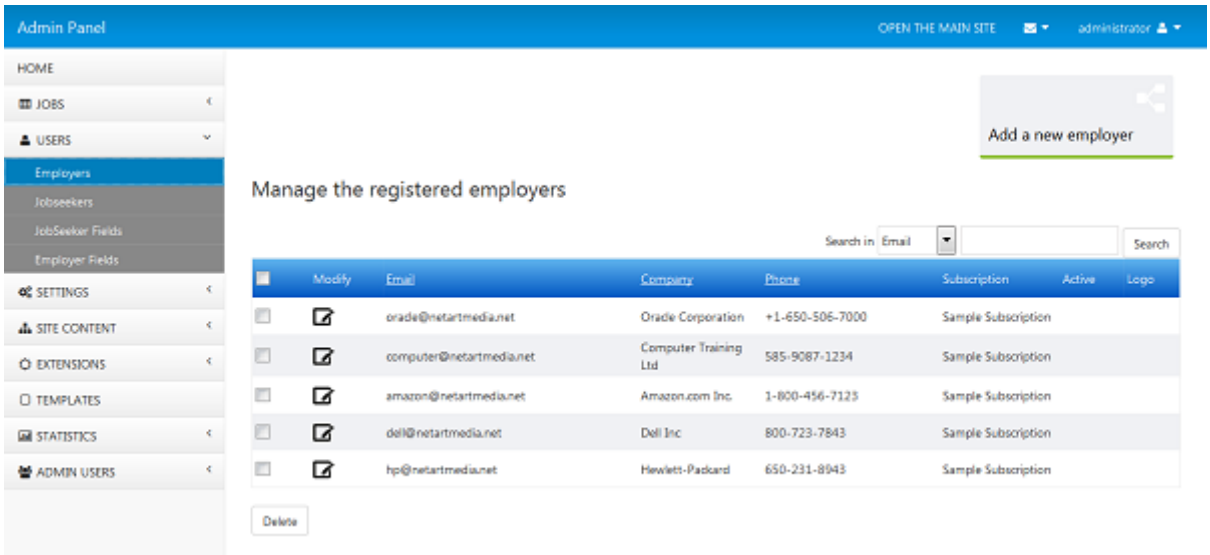


The page allows the administrator to monitor the job applications for the different jobs posted on the website.

Jobs → Uploaded Files



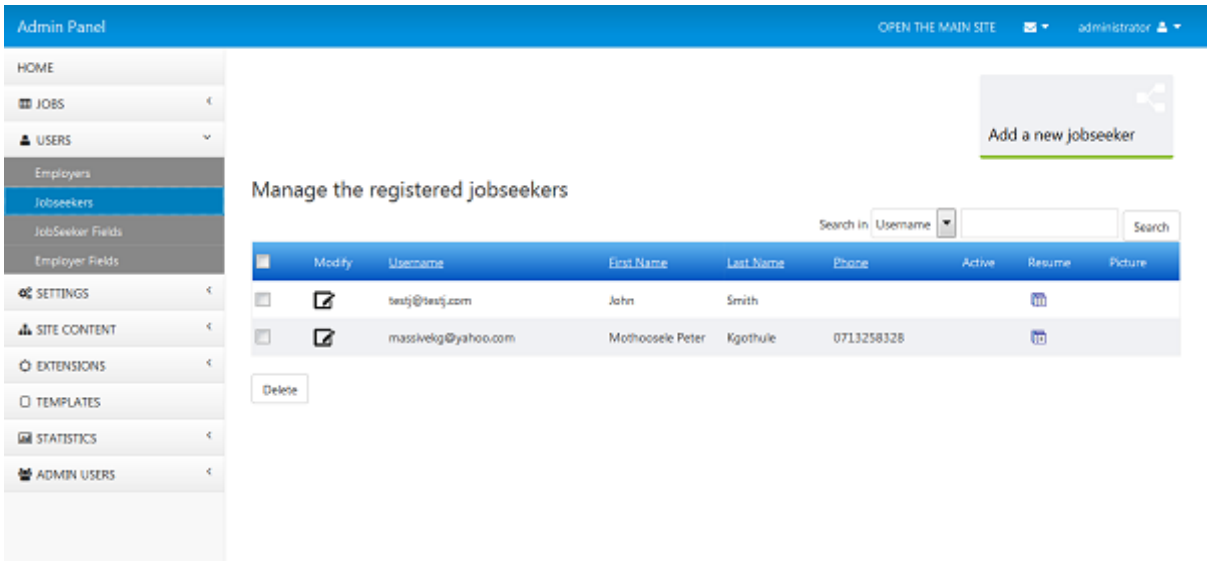
On this page, the administrator can see the files uploaded by the job seekers and also download any of them if he prefers so.



Users → Employers

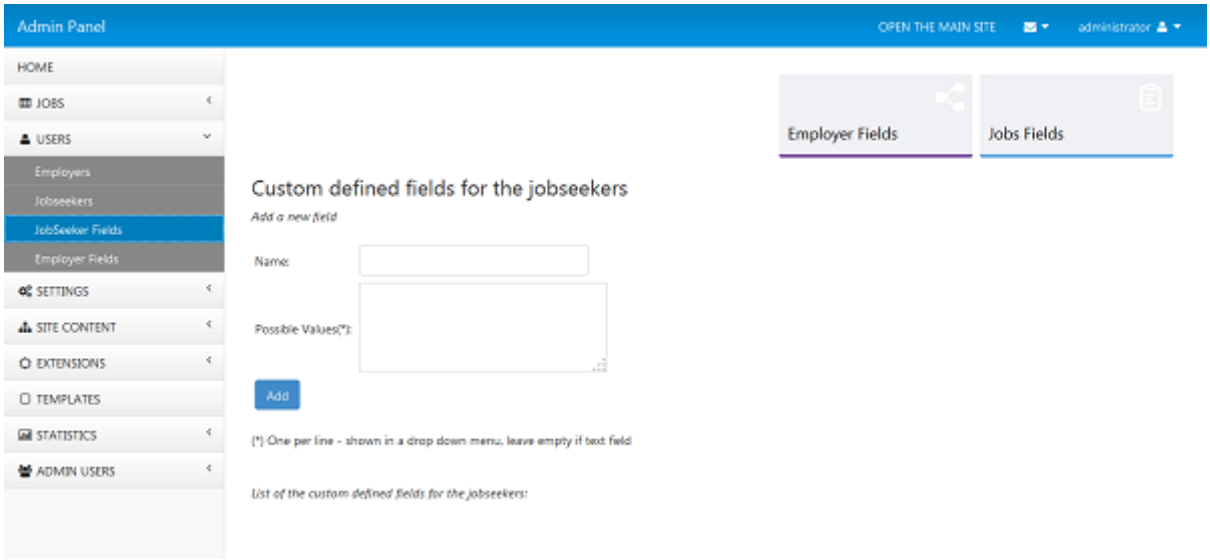
The page allows the administrator to monitor the employers and recruiting companies registered on the website and modify their profile information.

Users → Job seekers



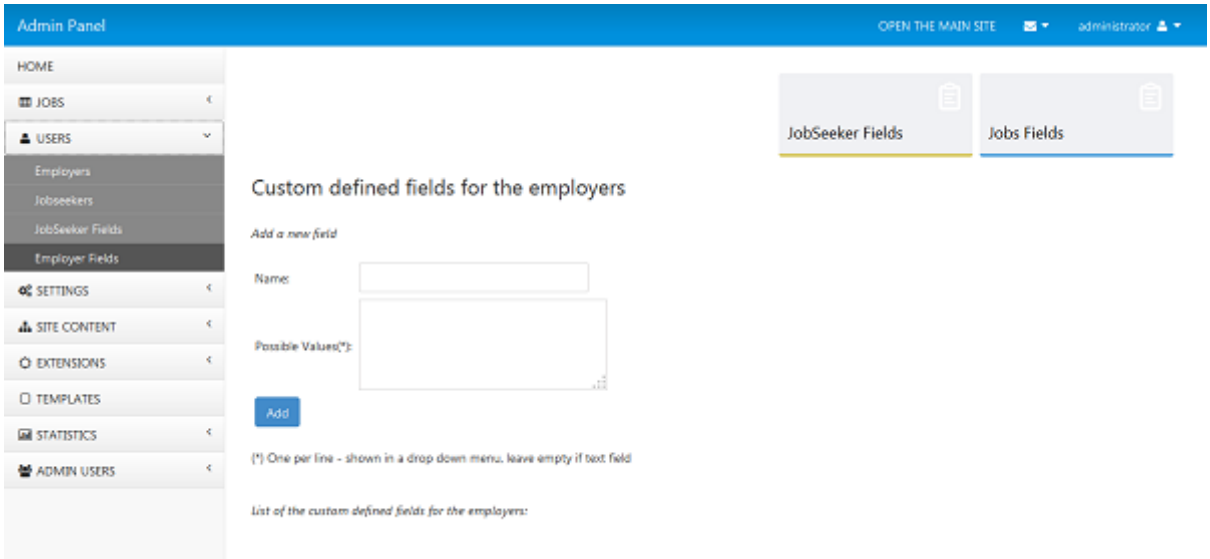
The page shows a list of the registered job seekers on the website with links allowing to modify their information and see their resume.

Users → Job seeker Fields



Except of adding custom fields for the job ads, the administrator is also able to add custom fields for the job seekers – the new fields will show up on the job seekers registration page and also on the page in the job seekers admin allowing them to change their profile information.

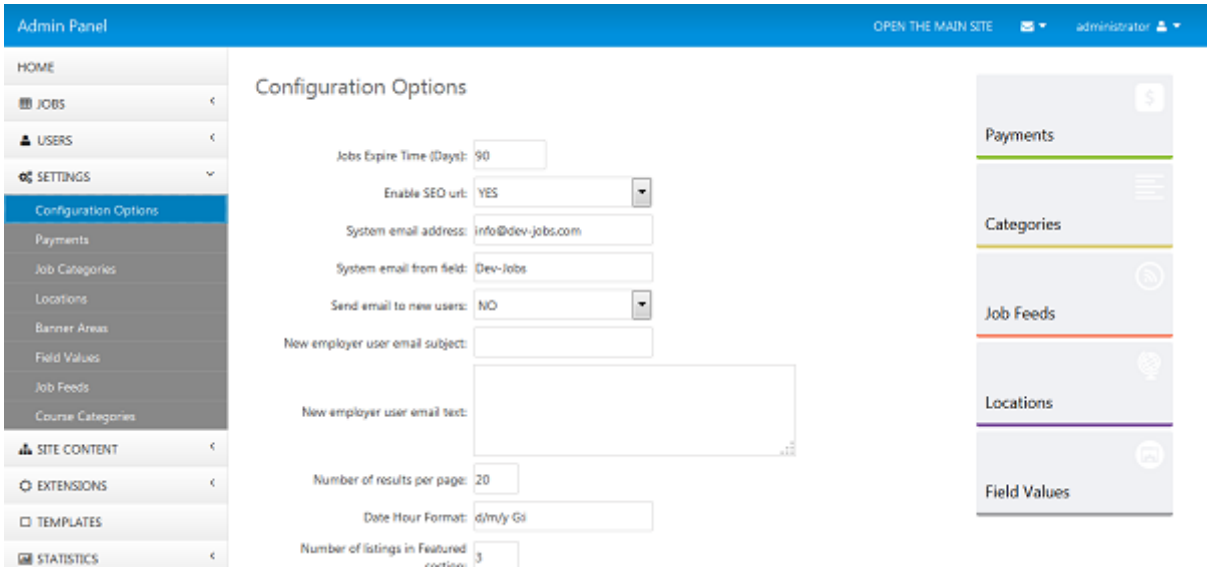
Users → Employer Fields



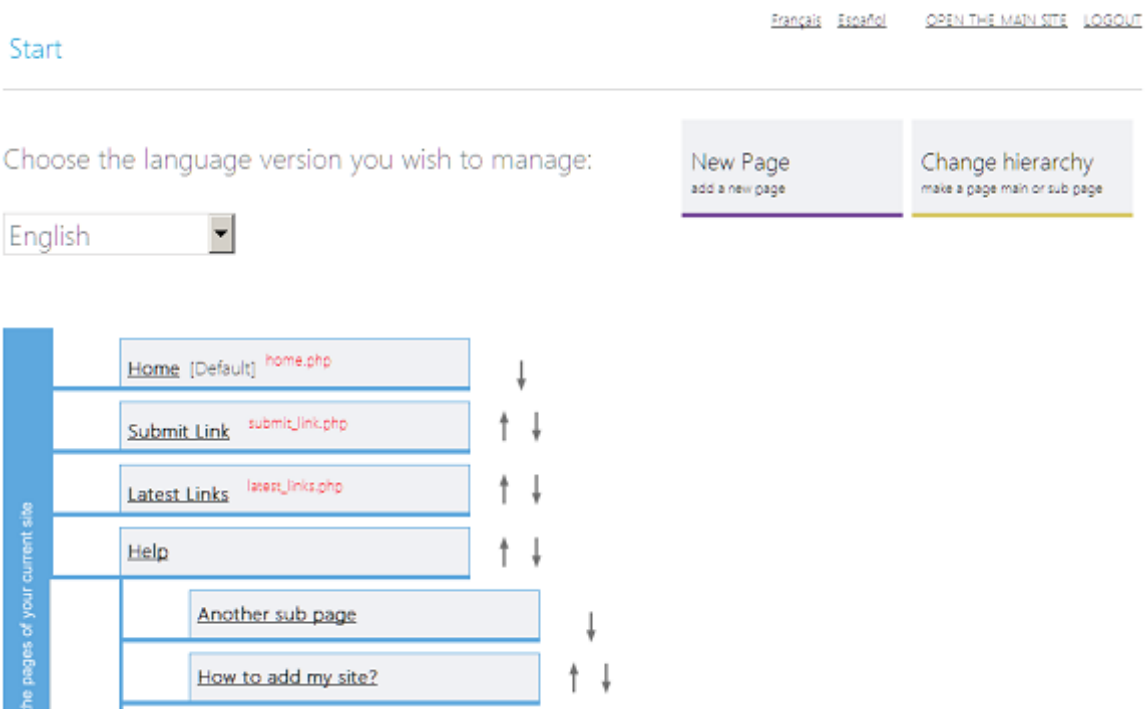
he page makes possible for the administrator to add custom fields for the employers / recruiting companies signing up on the website.

Settings → Configuration Options, Payments, Job Categories, Locations, Banner Areas, Field Values, Job Feeds, Course Categories

The page has many different options that you can use to configure your website in the way you prefer – set your timezone and currency, configure the preferred payment options and many others. Please find detailed description of the different settings in "2. Configuring the website"

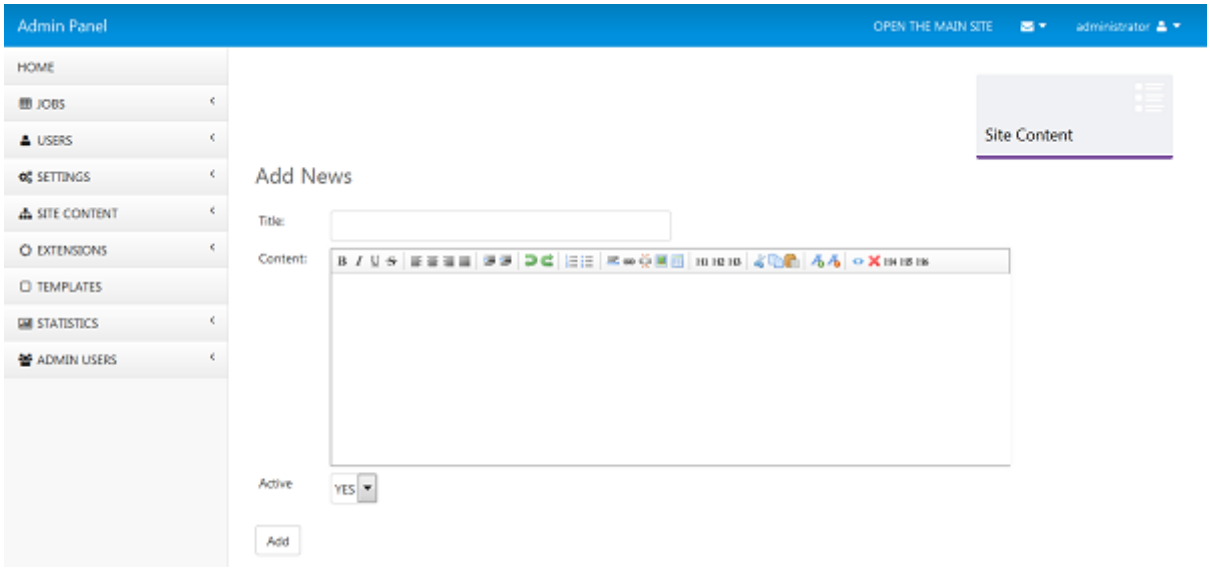


Site Content → Management



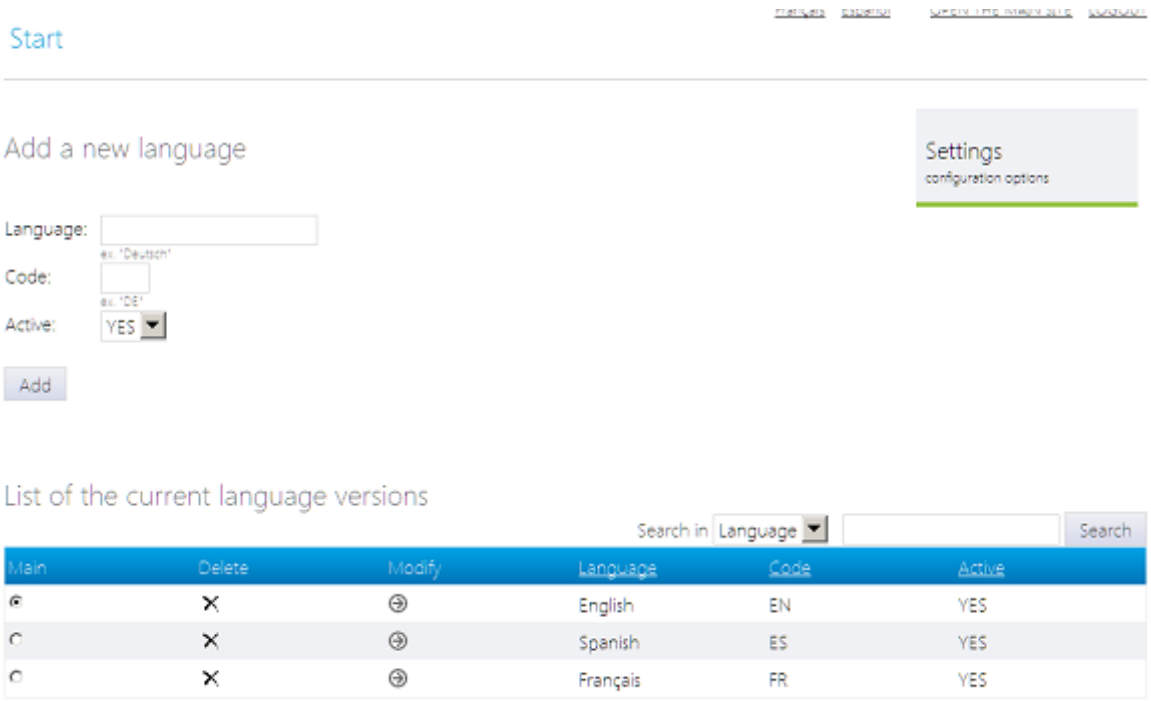
This is the main page to be used to manage the website structure and content – add new pages, remove or rename the current ones, modify the pages content, the page title meta keywords or meta description or set custom php extension to be executed for a page.

Site Content → News



Site Content → Language Versions

If you would like to run a multi-language website, it's necessary to add the additional languages from this page in the administration panel. Please note when you a add a new language, it's necessary to upload also the language file for it in the /include folder on your website. Please refer to the "Languages and language files" for more information and description of the language files and languages management.



Extensions → Files

The page shows the current files in the /extensions folder, which can be used for extensions of the pages or custom tags. Please note that files that should be used for custom tags have _tag at the end of their

name. A file can be set to be executed as extension for a page from the Website → Management page and for a tag from Extensions → Tags

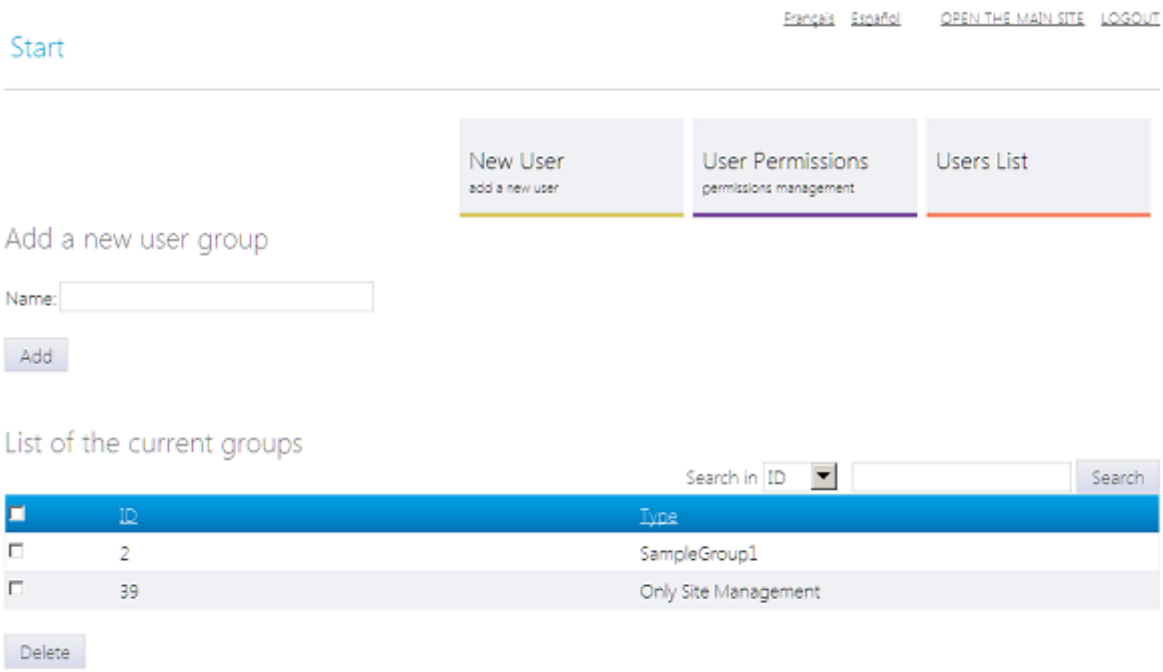
Statistics → Referrals

You can see on this page the last referrals, so you can easily track who is linking to your website and from where the traffic to your website comes from.

Users → User Groups, Users → New User, Users → User Permissions

Using these pages, you can add new administrator users to your website, put them in groups and set their permissions. This can be useful if you would like to have multiple users working on the website with permissions limited to just some selected pages. For example have a News Administrators group with permissions to access only the News Management functionality in the administration panel etc.



4. Website structure and content management

The functionality, different menus and options on the Site Content → Management page allow the administrator to manage the website structure – add new pages, rename or remove the existing ones etc. and also manage the content of the website, edit the content of the different pages, set extensions to be executed for them and others.

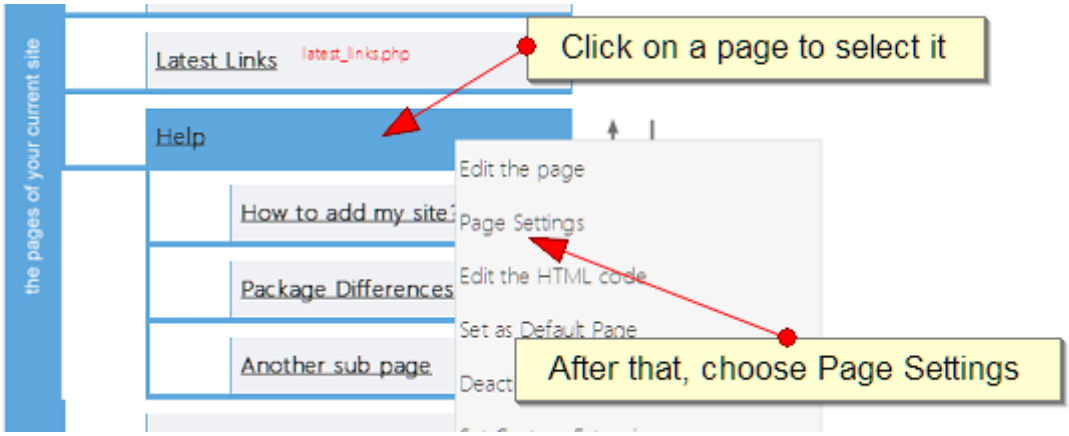
4.1. Structure management, adding new pages

Changing the front site pages meta title and description

In order to change the front site pages meta title, keywords or description, the administrator has to log in in the admin panel and go to the Website->Management page.
On this page, he will see the available website pages as a tree. He has to left click with the mouse on a page in order to select it and then choose from the Context menu which will show up "Page Settings".

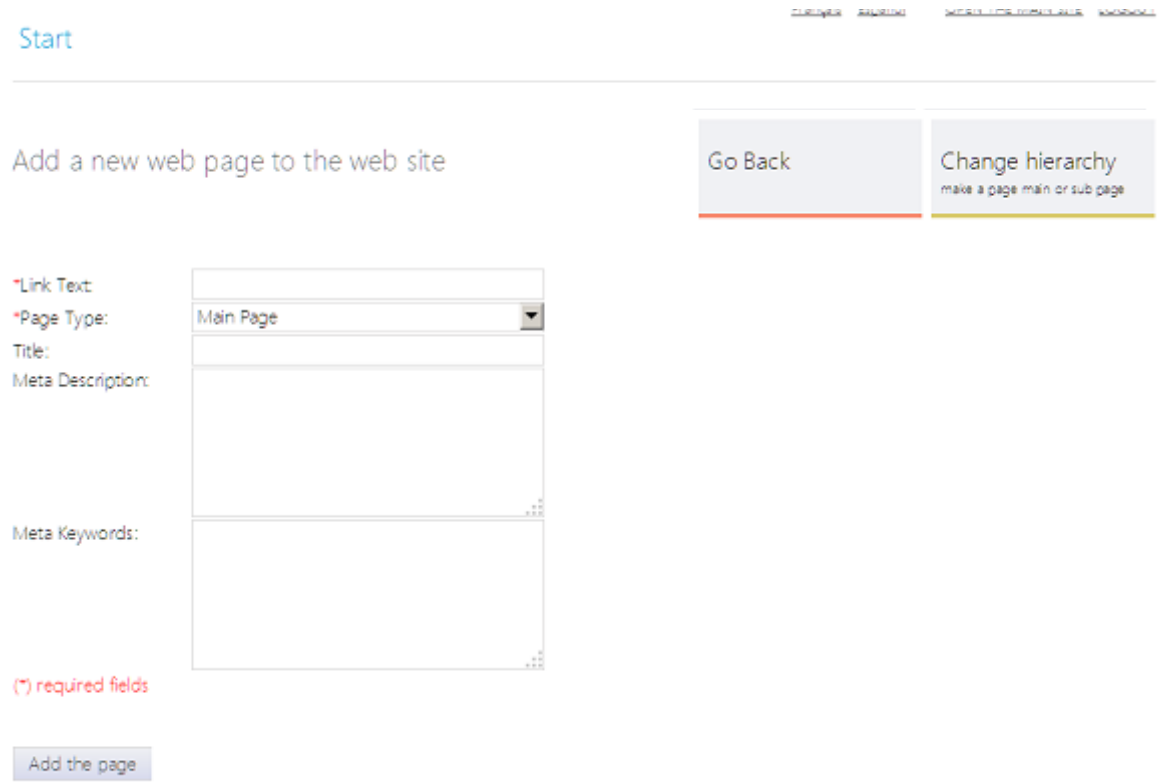


A new page will show up containing various page fields including also the page meta title description. The administrator has to enter the new values and click Save.

Adding new pages to the website

The ATN Jobs admin panel offers the possibility to freely edit the website structure – add, edit or delete the pages of the front site.

Please note that you need to define the website structure separately for the different language versions available (you could switch between the language versions by selecting the language from the big drop down menu at the top of the Website → Management page).
In order to add a new page to the front site you need to click on the New Page button at the top of Website → Management



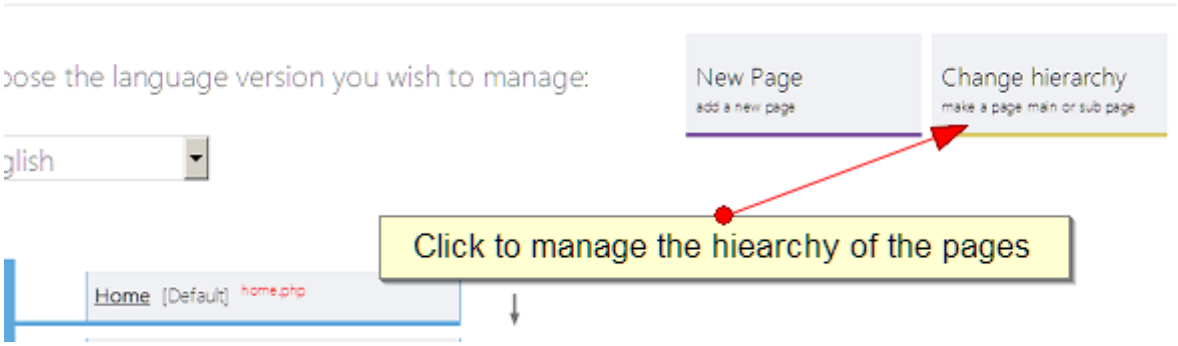
This will enter the form for adding a new page -

with the following fields:

- Link Text , the name of the link, which will show up in the main navigation menu
- Page Type, it can be either a main page or a sub page of an already existing page
- Title, the title of the page, which will show up in the title tag
- Meta Description, the meta description of the page, which will appear in the meta description tag to be used for search engines optimization purposes
- Meta Keywords, the meta keywords of the page, which have to be entered as a list and will appear after that in the meta keywords tag on the page, to be used for search engines optimization purposes

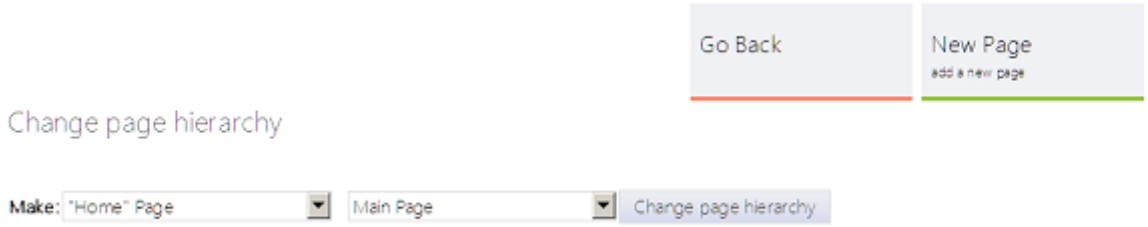
Changing the pages hierarchy

You can modify the front site pages hierarchy by clicking on the Change Hierarchy button at the top of Website → Management using the form at the bottom of the Website->Management page.



New Page
add a new page
Change hierarchy
make a page main or sub page
Click to manage the hiearchy of the pages
Home [Default] home.php

This will open the change hierarchy form - this form there allows to make a page of the website either a main page or a sub page of an ex-

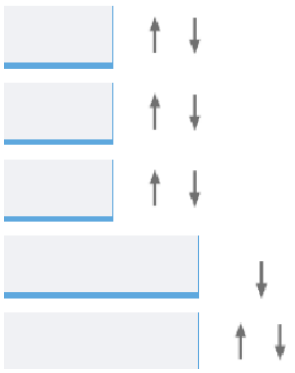


isting main page.

Changing the position of two pages

By changing the position of 2 pages, you'll change the order of the pages in the main navigation menu (for example replace the positions of the Home and About us pages).

Near every page on the Website->Management page, you could see 2 arrows indicating the up and bottom directions, you have to click on them in order to change the position of the pages.



Please note that you can change the position of 2 pages only if they are on the same level in the website hierarchy (for example main pages, or sub pages of the Home page etc.)

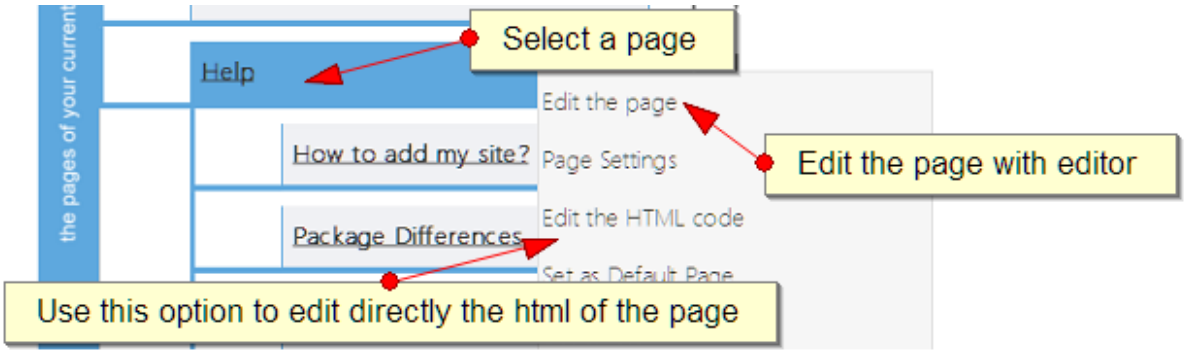
4.2. Modifying the content of the pages

The content of the pages can be modified from the Website->Management page in the admin panel. On this page, the administrator see the pages as a tree.

If the website is multi language, you need to choose the language version to manage by using the drop down to the left on Website → Management - this will switch between management of the pages of the different language versions.

Please note that if you would like to modify the content of a page and the website is multi language, you need to do this for every language. For example modify the "Contact" page in the English version, then the "Contacto" page in the Spanish version etc.

To edit the content of a page like for example the Contact us page, the administrator has to click on it and then choose either "Launch WYSI-



Select a page
Help
How to add my site?
Package Differences
Edit the page
Page Settings
Edit the HTML code
Edit the page with editor
Use this option to edit directly the html of the page

WYG editor" or the "Edit HTML code" option.
When using the Edit the HTML code option, you will be able to directly modify the html code of the page, while with the first (Edit the page), a

WYSIWYG (what you see is what you get) editor will open, allowing to modify the content of the page.

Please note that the pages for which php files are set to be executed (the "Set Custom Extension" option) can't be modified directly with the WYSIWYG editor. These pages can be easily distinguished on the Website->Management page, near their name one could see with red font the name of the php file to be executed, for example for "Latest Links" this is "latest_links.php".
The reason is that the code for these pages is rendered by the system, for example in the case of the Latest Links page, it's generated by the file /extensions/latest_links.php (which is the jobseekers sign up form), so the php code for it can't be modified with the WYSIWYG editor.

The page can be modified by editing directly the file for it or if only some texts need to be changed, this may be done by modifying the language file (/include/texts_en.php for English).

4.5. Languages and language files

The language files contain the text and words shown on the user interface. For every language there is one language file located in the /include folder.
The name and location of the language file is: /include/texts_[CODE OF THE LANGUAGE].php
or for example /include/texts_en.php for English. The language file contains the different messages as PHP variables, for example:

$M_HIDE_RECENT_SEARCHES="hide recent searches";
$M_CLEAR_ALL="clear all";
$M_SEE_ALL="see all";
$M_WEBSITE_HOME="Website Home";
…

Translating the language file consists of translating the messages enclosed in brackets to the right, for example for Spanish:

$M_HIDE_RECENT_SEARCHES="ocultar búsquedas recientes";
$M_CLEAR_ALL="borrar todos";
$M_SEE_ALL="ver todos";
$M_WEBSITE_HOME = "Sitio Web - Inicio";

In order to add a new language on the website, it's necessary to add the translated file in the /include folder and also the administrator has to use the form on the Settings → Language Versions page and enter the name of the new language for example “Deutsch” and the code for the new language, for example “DE”.
The language code shows up after in the page links and is also used to for the name of the language file (in this case the language file will be /include/texts_de.php) and it's important to be 2 characters (like EN, DE, PT, TR etc).

5. Front site templates management

5.1. Templates overview

A template for the front site represents a standard HTML code mixed with some special WebSiteAdmin tags (the compatibility with the WebSiteAdmin template system, makes possible the usage of templates and features from other products using it, as well as combining different scripts and software products to work on one website).

A front site could be either set as a file called "template.htm" in the main website folder or it can be set from the administration panel and

the Templates → Modify page. If both are available, then the template saved as a file “template.htm” will be used (it has higher priority).

You may fine below a brief description of the template system and tags and check also *6.3. Custom HTML tags* to see how you may create also your own custom tags with custom php files and code executed for them.

When the different page are rendered on the front site, these special tags inserted in the template are replaced by the corresponding content - let's consider the following example with a simple template:

<html>
<head>
<meta>
<title><site title/></title>
<meta name="description" content="<site description/>" />
<meta name="keywords" content="<site keywords/>" />
...

When the page is rendered, for example the tag <site title/> will be replaced with the page title (in general the page titles can be set by the administrator from the Website → Management page), so <title><site title/></title> will become:

<title>The page title will come here</title>

Please note that presence of none of these tags is obligatory, so you could combine them as you wish in order to create the website and layout suiting the best your specific needs. Be aware also that Web-SiteAdmin allows you to create your own tags (from the “Custom tags” in the back office) and set php files created by you to be executed and the generated content to be used in real time to replace the tag with it.

Here are some most common tags used in the default templates of the different scripts based on WebSiteAdmin:

<site title/> - Title of the web page
<site description/> - Meta description of the web page
<site keywords/> - Meta keywords of the web page
<site menu/>- Main navigation menu of the website
<site languages_menu/> - The languages menu of the website
<site content/> - The main content of a page
<site form/> - The custom server side forms for this page if there are any
<site logins/> - The main log in form of the website
<site quick_search/> - The quick search form on the front site
<site news/> - The news (the administrator can manage them from the News page in the ADMIN)
<site featured_ads/> - The block displaying the featured ads
<site bottom_menu/> - The bottom menu displayed at the bottom of the site (it contains the same items as the main navigation menu)

Please note that depending on the current product or script you are using, not all these tags may be available on it.

To see your current template, the tags in it or modify it, please go to Templates in the administration panel.

5.2. Adding new templates and modifying the existing ones

In the ATN Jobs administration panel you may find the following pages related to the front site templates management:

Templates → Select a Template

The page offers the possibility to the administrator to select a template which will be used for the front site between the currently available templates. Please note that in order to be able to select a template for a given website, you need to add first the template (if it doesn't still exist)

Templates → Add a New Template
This page can be used to add new templates to the website. The administrator can add the new template by directly pasting its HTML code.

Templates → Modify

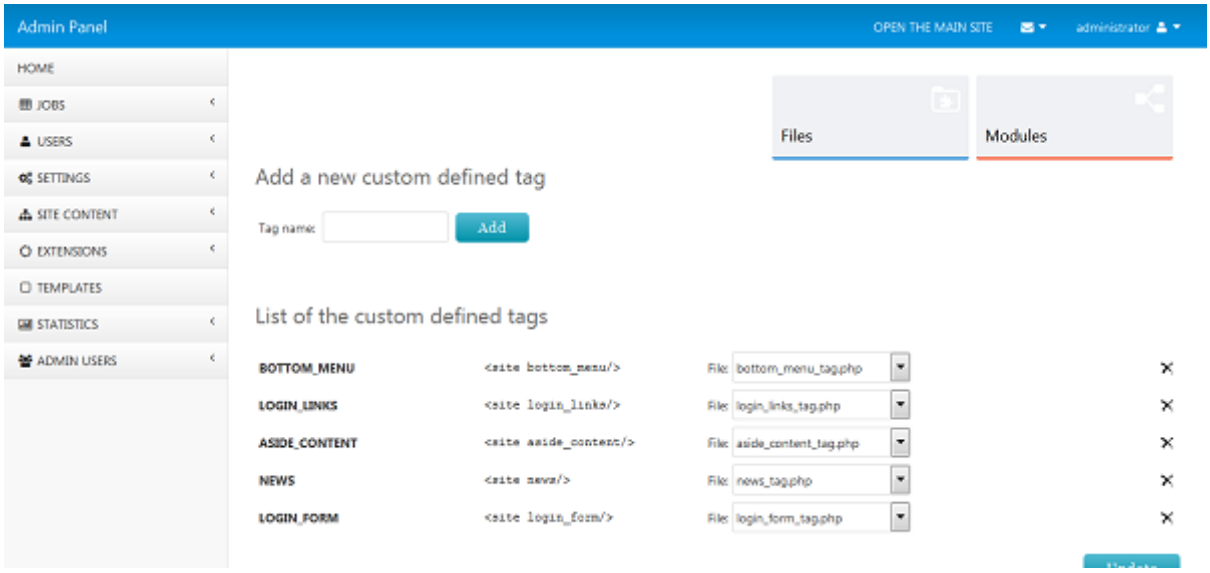
On this page the administrator can see the available templates and modify a selected template. In order to select a template for modification, the administrator should click on the Modify icon and then a new text area having the full template code will appear.

5.3. Custom HTML tags

The custom HTML tags provide a great way to expand the current functionality by creating your own php scripts to be executed and the content they output to be shown precisely in a selected position by the administrator.
This can be for example a php script calendar_tag.php showing a custom calendar, which needs to be added at the top right corner of all pages of the website.

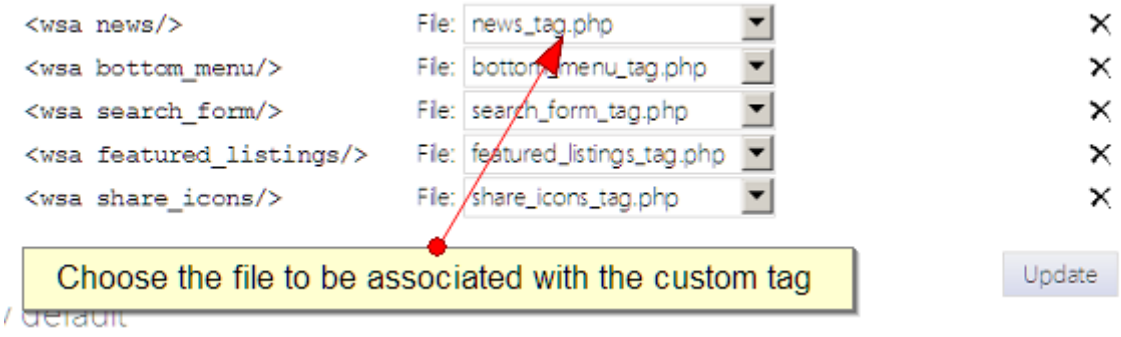
Creating a new custom tag is simple - the first step is to upload the corresponding PHP file in the /extensions folder on your site.
Please note the file names of php files, which will be used for tags should end with tag in their name – for example calendar_tag.php or news_tag.php etc.

Then from the Extensions → Tags page in the administrator panel, fill the tag name (for example: calendar) and click on the Add button. This will create the tag - <site calendar/> in this example and it will appear on the Tags page.



The tag should be defined from Extension → Tags and then inserted in the template or in the page content. When the page is rendered all the custom defined tags will be replaced by the content generated by the script you set.
The Tags page shows the current tags with their name, html code, the file to be executed (with a drop down listing all the uploaded tag files in the /extensions folder and a small delete icon allowing to delete the tag).

The final step when creating a new tag is to associate your tag with the php file you uploaded – this can be done by simply selecting the file from the File dropdown ("calendar_tag.php" in this example) and click on the Save button at the bottom of the page.

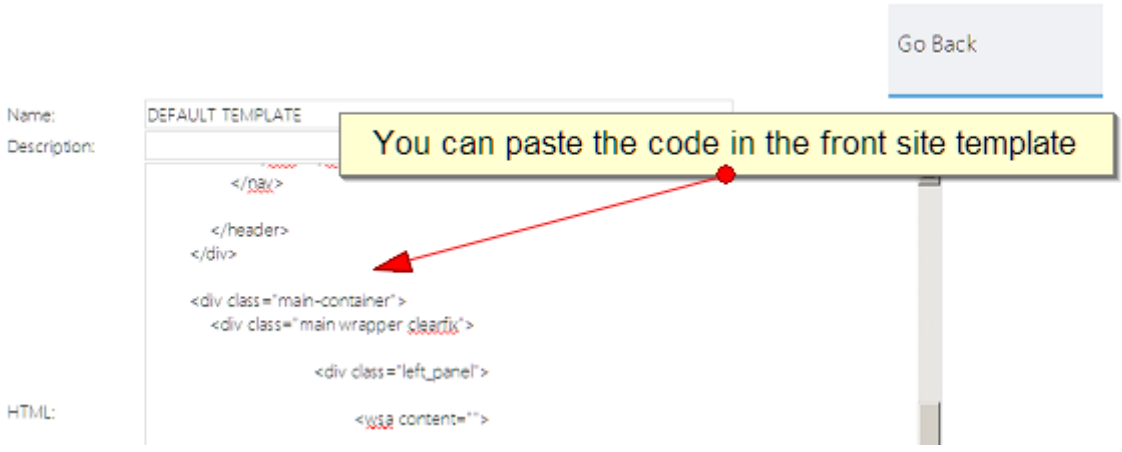


fter doing this, you can start using the tag by inserting it in the front site template (from Templates → Modify page) at the position you prefer in the template.

5.4. Adding Google AdSense advertisements or Google Analytics

Very often the administrator may need to add external HTML code on website, it can be for example the HTML code for Google AdSense or other type of advertisements or Google Analytics code or a code provided by Google WebMaster Tools to verify the website.

Such HTML codes need to be pasted in front site template, which can be done from the Templates → Modify page in the administration panel. On this page, it's necessary to click on the Modify icon – this will show the HTML code of the template and paste the piece of HTML



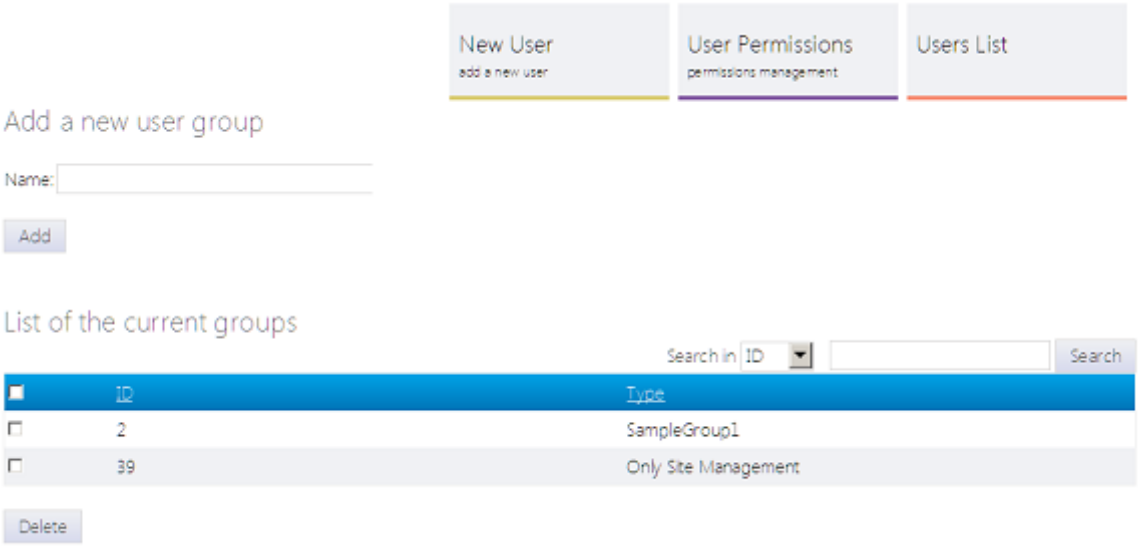
code for the banners, Google Analytics or similar.
When adding a counter or other tracking code like Googl Analytics, usually the best it to place it at the end of the template, for example just before the closing </body> tag.

For the advertisements the position will depend on what position exactly in the template (for example, top or bottom or to the right of the website pages etc.) the administrator would like to add them.

If you experience any difficulties when doing this, please don't hesitate to contact us and our support team will try to assist you asap.

6. Administration panel users and groups

The administrator has the possibility to create additional user groups for the main administration panel, add users in them and assign their permissions. This can be done from “Users” in the administration panel.

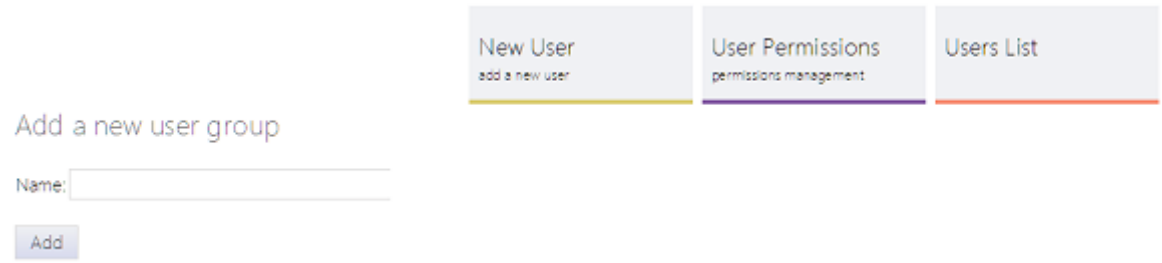


This functionality can be used if for example there are multiple persons working on the website (for example person A validating the listings posted by the users, person B responsible for the design of the website and templates management, person C adding news on the website etc.)

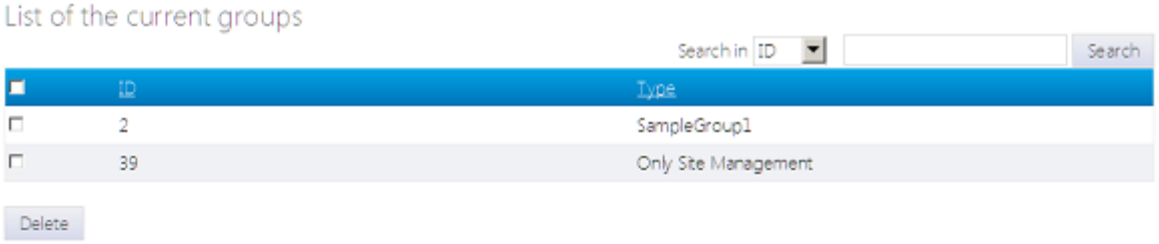
6.1. User groups

The user groups make easier the permissions management for the users – instead of setting individually the permissions for every users, it can be be possible to create different user groups, add the users in them and manage the permissions per group.
For example, it can be possible to create a group of users who will be responsible only for posting news on the website "NewsAdministrators" and won't have access to the other pages like the ones for validating the listings etc.

To create a new user group, the only field the administrator has to fill is the group user name.



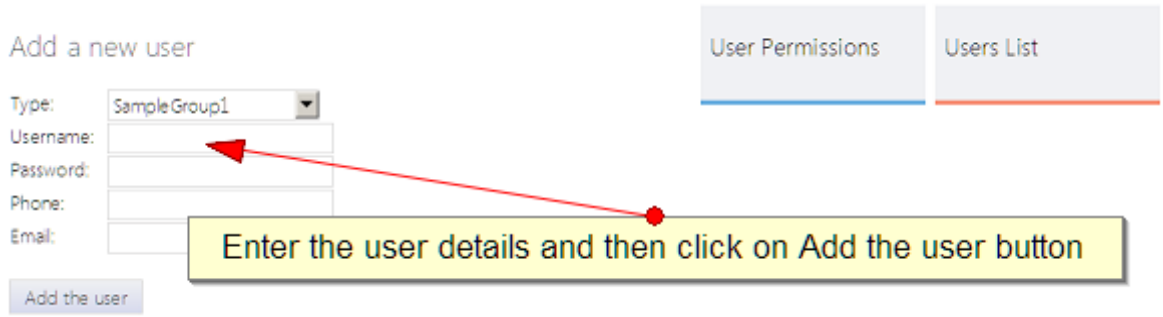
The page shows below also the list of the groups with their ID and a check box allowing to select one or many groups and delete them.



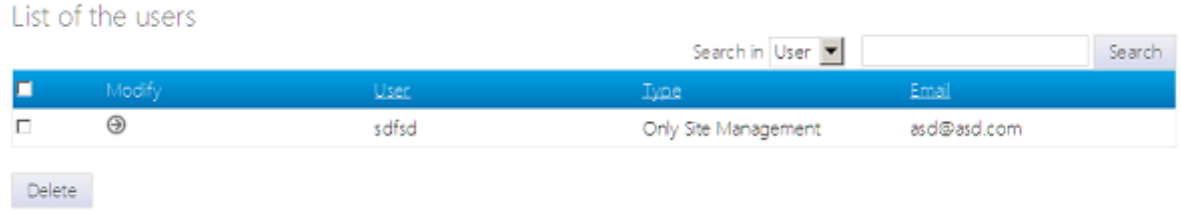
6.2. Adding new users

To add a new user, it's necessary to click on the New User button at the top of the User Groups page or choose directly from the main start menu Users → New User.

When adding a new user, it's necessary to select its Type or User Groups between the ones added by the administrator, enter his username, password, phone and email.

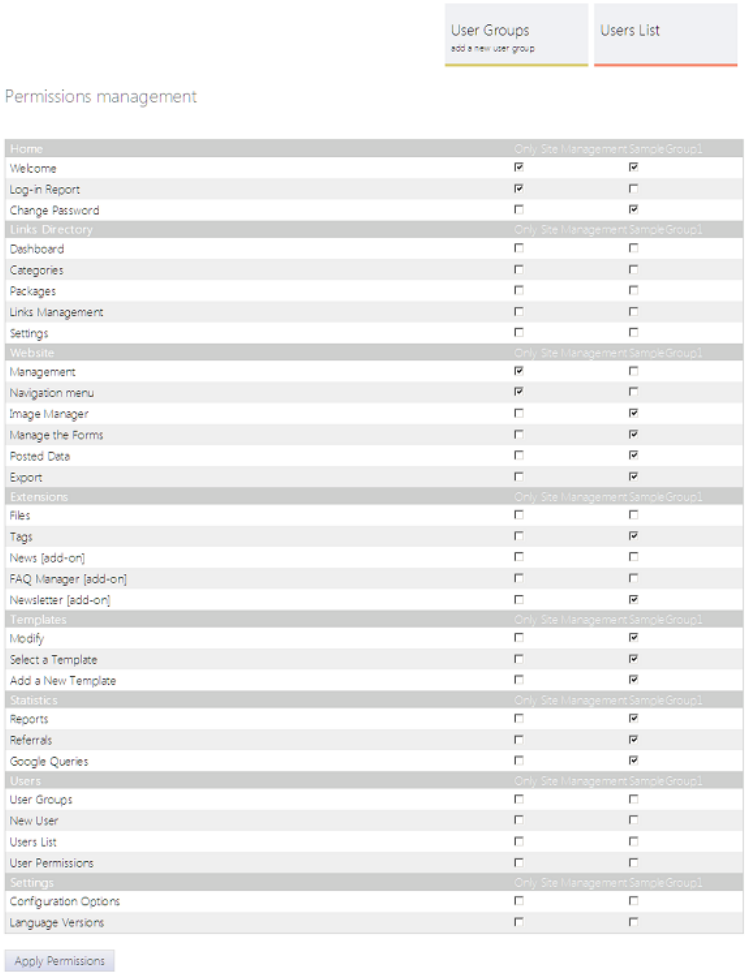


To see a list of the current users or modify their information, it's necessary to go to the Users List page (can be selected from the start menu Users → Users List or using the top buttons while in the Users category in the administration panel)



6.3. Permissions management

To set the permissions for the different user groups, it's necessary to go to the Users → User Permissions page in the administration panel.



The page shows a list of all the pages available by default in the administration panel and a check box for every box – to grant a permission for a selected page, it's necessary to check the box for it and when when ready, to click on the Save button at the bottom of the page.

his will save the permissions sets for the user group.

An user, member of an user group, which has been granted access to only some pages in the administration panel will see just these pages in the menus when he logs in.
